Understanding the gut ecosystem: bugs, drugs & diseases

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 2 December 2019 at 12.45 hours

by

Arnau Vich Vila

born on 29 August 1988
in Sant Cugat del Vallès, Spain

Propositions

The gut microbiota of patients with inflammatory bowel disease (IBD) is characterized by a decreased abundance of obligate anaerobes and a “blooming” of pathobionts. (This thesis)

Intestinal surgeries and disease location greatly influence the microbiome composition in patients with IBD. (This thesis)

The fecal microbiome has great potential as a biomarker and could be used to help distinguish patients with IBD from patients with irritable bowel syndrome. (This thesis)

IBD sub-phenotypes are related not only to changes in bacterial composition, but also to changes in absolute bacterial abundance. (This thesis)

The effects of environmental factors on gut microbiota composition dominate over the effects of genetics. Nonetheless, the study of IBD cohorts can help reveal associations between host genetics and gut microbial composition. (This thesis)

Commonly used medication affects the gut microbiota. (This thesis)

In the future, the combination of sequencing data with quantitative measurements of the gut microbiota will help to improve the comparability of different microbiome studies.

Studies involving the perturbation of the gut microbiota and the estimation of the ecosystem resilience are needed in order to identify the key characteristics of a “healthy” microbiota.

The gut microbiota is not an organ: it is an ecosystem. This notion is essential for designing therapeutic strategies that modify the gut microbiota.

“Science and everyday life cannot and should not be separated.”

Rosalind Franklin

“Words are never ‘only words’; they matter because they define the contours of what we can do.”

Slavoj Žižek

“Sono pessimista con l’intelligenza, ma ottimista per la volontà.”

Pessimism of the intellect, optimism of the will.

Antonio Gramsci

“Jongens, stop met luisteren naar Arnau.”

People, stop listening to Arnau.

Valerie Collij

Table of contents

Understanding the gut ecosystem: bugs, drugs & diseases

CHAPTER 1: INTRODUCTION	8	PART I: MICROBIOME IN GASTROINTESTINAL DISORDERS	
1. Gut microbiota	10	CHAPTER 2	26
2. How to study the gut microbiota: methods and cohorts used in this thesis	14	Interplay of host genetics and gut microbiota underlying the onset and clinical presentation of inflammatory bowel disease	
3. Research goals and outline of the thesis	18	CHAPTER 3	58
		Gut microbiota composition and functional changes in inflammatory bowel disease and irritable bowel syndrome	
		CHAPTER 4	84
		Whole exome sequencing analyses reveal gene-microbiota interactions in the context of inflammatory bowel disease	
		CHAPTER 5	118
		Combining absolute quantification of faecal bacteria with metagenomic sequencing data improves characterization of the gut microbiome in patients with Crohn's disease	

**PART II:
MEDICATION USE AND MICROBIOME
SIGNATURES**

CHAPTER 6 138

Pharmacomicrobiomics: a novel route towards personalized medicine?

CHAPTER 7 166

Proton pump inhibitors affect the gut microbiome

CHAPTER 8 188

Impact of 41 commonly used drugs on the composition, metabolic function and resistome of the gut microbiome

CHAPTER 9 214

Analysis of 1135 gut metagenomes identifies sex-specific resistome profile

**CHAPTER 10:
DISCUSSION AND
FUTURE PERSPECTIVES 230**

1. Discussion 231

2. Future perspectives 238

3. Final remarks 246

APPENDICES 254

Nederlandse samenvatting 256

Resumen español 259

Resum català 262

Curriculum vitae 266
