Optical preparation and detection of spin coherence in molecules and crystal defects

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 10 January 2020 at 14.30 hours

by

Gerrit Jan Jacob Lof

born on 30 March 1988
in Capelle aan den IJssel, the Netherlands

Supervisors

Prof. C. H. van der Wal

Prof. M. A. Loi

Co-supervisor

Dr. R. W. A. Havenith

Assessment committee

Prof. H. B. Braam

Prof. M. Orrit

Prof. J. Koehler

Contents

1	Introduction	1
1.1	Coherence and polarization of electron spins and photons	1
1.2	Optical orientation	2
1.3	Spin precession	3
1.4	Coherent population trapping	5
1.5	Jones calculus	5
1.6	Theoretical chemistry methods	7
1.7	Scope of this research and thesis outline	8
1.8	SI: Change of basis	11
1.9	SI: Jones calculus applied to a waveplate	13
2	Evolution of atomic optical selection rules upon gradual symmetry lowering	15
2.1	Introduction	16
2.2	The resonance lines of the hydrogen atom without spin	17
2.2.1	The hydrogen atom in the absence of a magnetic field . . .	17
2.2.2	The hydrogen atom in the presence of a magnetic field . .	19
2.2.3	Electric dipole radiation	19
2.3	The resonance lines of the hydrogen atom including spin	20
2.4	Evolution of optical selection rules for the hydrogen atom in a C_{2v} arrangement of point charges	22
2.4.1	The hydrogen atom in the presence of a weak magnetic field	25
2.4.2	The hydrogen atom in the presence of a C_{2v} arrangement of point charges and a weak magnetic field	27
2.5	Summary and Outlook	31
2.6	Author contributions	32
2.7	SI: Energy levels of the hydrogen atom in a magnetic field	33
2.8	SI: Electric dipole oscillations	34
2.9	SI: Spin-orbit coupling	36

2.10	SI: The resonance line of the hydrogen atom including spin	37
2.11	SI: Transition dipole moment and oscillator strength	40
2.12	SI: Jones calculus applied to the oscillation of an atomic electric dipole	41
2.13	SI: Perturbation-theory description of distortion by extra charges	43
3	Proposal for time-resolved optical preparation and detection of triplet-exciton spin coherence in organic molecules	45
3.1	Introduction	46
3.2	Theoretical proof of principle for a molecular TRFR experiment .	46
3.3	Feasibility analysis	53
3.3.1	TRFR experiment with an ensemble of randomly oriented molecules	53
3.3.2	Single molecule TRFR experiment	54
3.3.3	Franck-Condon suppression of optical transitions	54
3.3.4	Persistence of spin-orientation effects for symmetries lower than C_{2v}	55
3.4	Summary and Outlook	55
3.5	Author contributions	56
3.6	SI: Principles of the TRFR technique for an idealized Π -system .	57
3.7	SI: Fundamentals of a molecular TRFR experiment	64
3.8	SI: Polarization rotation for a TRFR experiment applied to a V - system	66
3.9	SI: Idealized TRFR scenario for a V -system	73
3.10	SI: TRFR model results and discussion	75
3.11	SI: Computational details and methods	78
3.12	SI: Symmetry analysis	83
3.13	SI: Franck-Condon factors	85
3.14	SI: Optical selection rules of platinum porphyrins	86
3.15	SI: Ensemble of randomly oriented molecules	91
4	Proposal for time-resolved optical probing of electronic spin coherence in divacancy defects in SiC	97
4.1	Introduction	98
4.2	Fundamentals for a TRFR experiment with a homogeneous en- semble of c-axis divacancies in SiC	99
4.3	Estimating the polarization rotation of a linear probe for a TRFR experiment with c-axis divacancies in SiC	106

4.3.1	Assumptions and parameters	106
4.3.2	Results and discussion	108
4.4	Summary and Outlook	109
4.5	Author contributions	110
4.6	SI: Estimating the transition dipole moment of divacancies in SiC	111
4.7	SI: Dependency on the magnetic field angle for the optical selection rules of c-axis divacancies in SiC	112
5	Identification and tunable optical coherent control of transition- metal spins in silicon carbide	115
5.1	Introduction	116
5.2	Materials and experimental methods	118
5.3	Single-laser characterization	120
5.4	Two-laser characterization	122
5.5	Analysis	123
5.6	Coherent Population Trapping	126
5.7	Further discussion	129
5.8	Summary and Outlook	129
5.9	Methods	130
5.10	Author contributions	131
5.11	SI: Single-laser spectroscopy	132
5.12	SI: Additional two-laser spectroscopy for Mo in 6H-SiC	133
5.13	SI: Two-laser spectroscopy for Mo in 4H-SiC	135
5.14	SI: Franck-Condon principle with respect to spin	138
5.15	SI: V-scheme dip	140
5.16	SI: Modeling of coherent population trapping	143
5.17	SI: Anisotropic g -factor in the effective spin-Hamiltonian	144
5.17.1	Relationship between effective spin Hamiltonian and local configuration of the defect	144
5.17.2	Ion in 4d ¹ configuration in the presence of crystal field of C _{3v} symmetry and spin-orbit coupling	146
5.17.3	Validity of our assumptions	150
5.17.4	Summary	152
	References	153
	Summary	165

Samenvatting	169
Acknowledgements	173
Curriculum Vitae	175
