DIAMOND MAGNETOMETRY
FOR SENSING IN BIOLOGICAL
ENVIRONMENT

FELIPE PERONA MARTÍNEZ

The research presented in this thesis was carried out in the Bioimaging and Bioanalysis group at the Department of Biomedical Engineering of the University of Groningen. More information about this group can be found in the web site bioanalysisgroup.com.

Felipe Perona Martínez was supported from the Chilean government via a CONICYT scholarship (Grant No. 72160222).

Diamond Magnetometry for sensing in biological environment

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

woensdag 22 januari 2020 om 14:30 uur

door

Felipe Patricio Perona Martínez

geboren op 29 september 1979
te Recoleta, Chili

Promotor

Prof. dr. R. Schirhagl

1	Introduction	1
2	Improving the cellular uptake	5
2.1	Introduction	7
2.2	Results and discussion	9
2.2.1	Characterization of coated nanodiamonds with AFM	9
2.2.2	Colloidal stability of protein-based polymer coated nanodiamonds	10
2.2.3	Binding strength of protein polymers to nanodiamonds	12
2.2.4	Photoluminescence properties of protein polymer coated nanodiamonds	13
2.2.5	Cytotoxicity of protein polymer coated nanodiamonds	14
2.2.6	Cell uptake of bare and protein polymer coated nanodiamonds	15
2.3	Experimental Details	18
2.3.1	Materials	18
2.3.2	Methods	19
2.4	Concluding remarks	21
2.5	Supporting Information	23
2.5.1	Binding of the C ₄ protein polymer	23
2.5.2	Clusters of nanodiamonds	23
2.5.3	Magneto-optical properties	24
2.5.4	Protein polymer binding stability at different pH . .	25
3	Sample Preparation in Proteomics	33
3.1	Introduction	35
3.2	Materials and Methods	36
3.2.1	Materials	36
3.2.2	Sample preparation	37
3.2.3	Sample preparation with carbon black	37
3.2.4	Protein analysis	37

3.2.5	Data processing	38
3.3	Results	40
3.4	Conclusions	47
4	Detecting free radicals	53
4.1	Introduction	55
4.2	Results and discussion	56
4.2.1	Dependence of the size of the nanodiamonds on the relaxation constant T_1	58
4.2.2	Performance of the NVs in biologically relevant conditions	59
4.2.3	Measuring free radicals in situ	62
4.3	Experimental Details	65
4.3.1	Nanodiamonds	65
4.3.2	T_1 measurements	65
4.3.3	GdCl ₃ sensitivity in different conditions	65
4.3.4	Hydrogen Peroxide and UV light	66
4.3.5	Measuring the hydroxyl radical by HPF	66
4.3.6	Measuring the concentration of hydroxyl radical by HTA	66
4.3.7	Measuring the Fenton reaction by diamond magnetometry	67
4.4	Concluding remarks	67
4.5	Supporting Information	68
4.5.1	Measuring free radicals in-situ	68
4.5.2	Measuring the concentration of hydroxyl radical by HTA	68
4.5.3	Size distribution of the nanodiamonds	70
5	Discussion	75
6	Summary — Samenvatting	81
6.1	Summary	81
6.2	Samenvatting	84
	Acknowledgments	89
