Steps towards *de-novo* life

Compartmentalization and feedback mechanisms in
synthetic self-replicating systems

Guillermo Monreal Santiago

The work described in this thesis was carried out at the Stratingh Institute for Chemistry, University of Groningen, The Netherlands.

This work was financially supported by the European Union through the Marie Skłodowska-Curie ITN fellowship "Multi-Stimuli Responsive Molecular Systems and Materials (ResMoSys)" (Grant agreement ID: 642192)

Printed by Gildeprint, The Netherlands

ISBN: 978-94-034-2573-3 (printed version)

ISBN: 978-94-034-2572-6 (digital version)

Steps towards de-novo life

Compartmentalization and feedback mechanisms in synthetic
 self-replicating systems

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Friday 15 May 2020 at 11.00 hours

by

Guillermo Monreal Santiago

born on 30 November 1992
 in Madrid, Spain

Supervisors

Prof. dr. S. Otto

Prof. dr. R.C. Chiechi

Assessment Committee

Prof. dr. W.T.S. Huck

Prof. dr. M.M.G. Kamperman

Prof. dr. T.M. Hermans

Contents

1	Introduction: Progress towards the synthesis of fully artificial ("<i>de-novo</i>") life	7
1.1	Why do we research <i>de-novo</i> life?	8
1.2	What are we trying to make? Definitions of minimal life	9
1.3	Self-replication	10
1.4	A synthetic replicator based on dynamic combinatorial chemistry	14
1.5	Compartmentalization	17
1.6	Metabolism	21
1.7	Systems chemistry and emergent properties	24
1.8	Contents of this thesis	25
1.9	About the structure of this thesis	26
1.10	References	26
2	Mechanistic studies uncovering a new pathway for supramolecular polymerization and replication	35
2.1	Introduction	36
2.2	Results and discussion	38
2.3	Conclusions	43
2.4	Material and methods	44
2.5	Supplementary material	50
2.6	Further reading	55
2.7	Acknowledgements	55
2.8	References	55
3	Complex coacervation as a compartmentalization strategy for synthetic self-replicators	59
3.1	Introduction	60
3.2	Preliminary results	62
3.3	Results and discussion	64
3.4	Conclusions	71
3.5	Further experiments	73
3.6	Materials and methods	74
3.7	Supplementary material	81
3.8	Acknowledgements	87
3.9	References	88
4	Emergence of light-driven protometabolism upon recruitment of a photocatalytic cofactor by a self-replicator	93
4.1	Introduction	94
4.2	Preliminary results	97

CONTENTS

4.3	Results and discussion	99
4.4	Conclusions	104
4.5	Further experiments	105
4.6	Material and methods	107
4.7	Supplementary material	112
4.8	Acknowledgements	127
4.9	References	127
5	Towards an autonomous chemical oscillator	131
5.1	Introduction	132
5.2	Preliminary results	134
5.3	Results and discussion	136
5.4	Conclusions	146
5.5	Further experiments	147
5.6	Materials and methods	149
5.7	Supplementary material	153
5.8	Acknowledgements	163
