Tabel of contents

1	General introduction	9
2A	The MELFO-Study: a multi-center prospective randomized clinical trial on the effects of a reduced stage-adjusted follow-up schedule on cutaneous melanoma IB-IIc patients - results after 3-years	25
2B	ASO author reflections: Stage-adjusted reduced follow-up of melanoma patients is justified and cost effective, until biomarkers to predict prognosis have been identified	45
3	Increase of sentinel lymph node melanoma staging in the Netherlands; still room and need for further improvement	51
4	Obesity is not associated with decreased recurrence-free period, melanoma-specific survival, and overall survival in clinical stage IB-II melanoma patients	73
5	S-100B as an extra selection tool for FDG PET/CT scanning in follow-up of AJCC Stage III melanoma patients	97
6	The association between active tumor volume, total lesion glycolysis and levels of S-100B and LDH in stage IV melanoma patients	115
7	Summary and conclusion	139
8	Samenvatting en conclusie	149
9	Future perspectives	159
10	Curriculum vitae	179
	Dankwoord	183
