Seek and Destroy

Light-Controlled Cancer Therapeutics for Local
Treatment

Mark Wilhelmus Henricus Hoorens

On the cover:

De mooiste lampen die ik ken

Mark Wilhelmus Henricus Hoorens
PhD Thesis
Rijksuniversiteit Groningen

First edition, 2020

The work was financially supported by the Netherlands
Organization for Scientific Research (NWO), VIDI grant nr.
723.014.001

The research leading to these results has received funding from
LASERLAB-EUROPE (grant agreement no. 654148, European
Union's Horizon 2020 research and innovation programme).

Seek and Destroy

Light-Controlled Cancer Therapeutics for Local Treatment

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

woensdag 22 april 2020 om 16.15 uur

door

Mark Wilhelmus Henricus Hoorens

geboren op 12 juli 1992
te Spijkenisse

Promotores

Prof. dr. W.C. Szymanski

Prof. dr. P.H. Elsinga

Prof. dr. B.L. Feringa

Beoordelingscommissie

Prof. dr. W.R. Browne

Prof. dr. R. Leurs

Prof. dr. J.M. van Dijl

Table of Content

Chapter 1	Perspective and Outline	11
1.1	Aim of the research described in this thesis	12
1.2	Thesis outline	13
1.3	References	14

Chapter 2	Reversible, Spatial and Temporal Control over Protein Activity Using Light	17
2.1	The limitations of the traditional tools to study protein function	18
2.2	Why is reversible, spatial and temporal control over protein activity important?	19
2.3	Light is an emerging external stimulus to control protein activity	19
2.4	Photo-control over enzymatic activity	21
2.5	Can bio-active molecules with photo-controlled activity be developed for every protein?	22
2.6	The current limitation of photoswitchable bio-active molecules as a research tool	24
2.7	Concluding remarks and future prospects	25
2.8	Appendix 1: Understanding light-controlled drugs: molecular structure and photochemistry	26
2.9	References	27

Chapter 3	Glutamate Transporter Inhibitors with Photo-Controlled Activity	31
------------------	--	-----------

3.1	Introduction	32
3.2	Results and discussion	34
3.2.1	Design and synthesis	34
3.2.2	Photochemical properties	36
3.2.3	Biological evaluation	37
3.3	Conclusions	40
3.4	Acknowledgements	41
3.5	Experimental contributions	41
3.6	Experimental data	41
3.6.1	General remarks	41
3.6.2	Synthesis	42
3.6.3	Analysis of the photochemical properties	47
3.6.4	Uptake assay	49
3.7	References	53

Chapter 4 Light-controlled inhibition of BRAF^{V600E} kinase **57**

4.1	Introduction	58
4.2	Results and discussion	61
4.2.1	Design and synthesis	61
4.2.2	Photochemical properties of compounds 2a-h	63
4.2.3	Biological evaluation	64
4.3	Conclusion	68
4.4	Acknowledgements	68
4.5	Author contributions	69
4.6	Experimental data	69
4.6.1	Inhibition studies	69
4.6.2	Cytotoxicity studies	73
4.7	References	74

Chapter 5 Towards ¹⁸F-labelling of a Photoswitchable Bio-active Molecule **79**

5.1	Introduction:	80
5.2	Results and discussion	81
5.2.1	Design	81
5.2.2	Synthesis of photoswitchable HDAC2 inhibitors	83

5.2.3	Photochemical evaluation	85
5.2.4	Enzyme inhibition studies	86
5.3	Discussion and outlook	88
5.4	Experimental contributions	88
5.5	Experimental data	88
5.5.1	General synthetic remarks	88
5.5.2	Synthetic procedures	89
5.5.3	Enzyme inhibition studies	90
5.6	References	91

Chapter6 Iminothioindoxyl as a Molecular Photoswitch with 100 nm Band Separation in the Visible Range 95

6.1	Introduction	96
6.2	Results and discussion	97
6.2.1	Design and synthesis of ITI	97
6.2.2	Solvent effects of ITI photo-isomerization	98
6.2.3	<i>Z-E</i> isomerization of ITI is a fast process	102
6.2.4	Substituent effects on ITI photo-isomerization	104
6.2.5	Isomerization of ITI in aqueous solutions	107
6.3	Conclusion	107
6.4	Acknowledgements	108
6.5	Experimental contributions	108
6.6	Experimental data	109
6.6.1	General synthetic remarks	109
6.6.2	Synthetic procedures	109
6.6.3	Transient Absorption Spectroscopy	112
6.6.4	NMR Studies on ITI Photo-isomerization and thermal relaxation	116
6.7	References	119

Chapter7 Tuning the properties of the Iminothioindoxyl photoswitch 125

7.1	Introduction:	126
7.2	Results and Discussion	128
7.2.1	ITIs with substituents at the R ₁ position	128
7.2.2	ITIs with substituents at the R ₂ /R ₃ position	131

7.2.3	The role of the sulfur in ITI photo-isomerization.	132
7.2.4	ITIs with substituents at the R ₄ position	133
7.3	Conclusion	135
7.4	Experimental Contributions	135
7.5	Experimental data	135
7.5.1	General synthetic remarks	135
7.5.2	Synthetic procedures	135
7.5.3	Transient Absorption Spectroscopy	141
7.6	References	143

Chapter 8 Towards pH and light dual controlled Iminothioindoxyl photoswitches for medicine

		147
8.1	Introduction:	148
8.2	Results and Discussion:	151
8.2.1	UV/VIS and NMR titrations:	151
8.2.2	Photo-isomerization of protonated ITI	154
8.2.3	Evaluation of the potential of dual-responsive ITIs for medicine	156
8.3	Mechanistic studies of protonated ITI photo-isomerization	157
8.4	Conclusion and outlook	159
8.5	Experimental contributions	160
8.6	Experimental data	160
8.6.1	General synthetic remarks	160
8.6.2	Synthetic procedures	160
8.6.3	Titration experiments	161
8.6.4	Transient Absorption Spectroscopy	161
8.7	References	161

Chapter 9 Appendices

		165
9.1	English summary	166
9.2	Nederlandse samenvatting	168
9.3	Populairwetenschappelijke samenvatting	170
9.4	Acknowledgements	173
