Enhancing the antimicrobial potential of lanthipeptides by employing different engineering strategies

Xinghong Zhao

Enhancing the antimicrobial potential of lanthipeptides by employing different engineering strategies

The scientific studies presented in this thesis were performed at the Department of Molecular Genetics, Groningen Biomolecular Sciences and Biotechnology Institute, University of Groningen, Groningen, 9747 AG, The Netherlands.

The candidate was financially supported by the China Scholarship Council (CSC) and the University of Groningen.

Printing of this thesis was financially supported by the Graduate School of Science and Engineering and the University of Groningen.

university of
groningen

Enhancing the antimicrobial potential of lanthipeptides by employing different engineering strategies

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 22 June 2020 at 9.00 hours

by

Xinghong Zhao

born on 3 September 1990
in Sichuan, China

Supervisors

Prof. Oscar P. Kuipers

Prof. Gert N. Moll

Assessment Committee

Prof. A.J.M. Driessen

Prof. G.J. Poelarends

Prof. G.P. Van Wezel

Contents

Chapter 1	General introduction	7
Chapter 2	An engineered double lipid II binding motifs-containing lantibiotic displays potent and selective antimicrobial activity against <i>E. faecium</i>	29
Chapter 3	Mimicry of non-ribosomally produced antimicrobials by ribosomal synthesis and posttranslational modification	59
Chapter 4	High-throughput screening for substrate specificity-adapted mutants of the nisin dehydratase NisB	83
Chapter 5	Silver@nisin nanoclusters are highly effective against biofilm-forming pathogens found in wound infection	121
Chapter 6	Summary and General Discussion	139
	Samenvatting	151
	Acknowledgements	157
	Publications	161
