**Lipotoxicity in
Non-alcoholic Fatty Liver Disease:
Mechanisms and Prevention in
Experimental Models**

Yana Geng

The research presented in this thesis was performed in the Department of Gastroenterology and Hepatology, Faculty of Medical Sciences, University Medical Center Groningen (UMCG), University of Groningen, the Netherlands.

The research described In this thesis was financially supported by the China Scholarship Council (CSC), Graduate School of Medical Science, University of Groningen and De Stichting De Cock-Hadders.

The author gratefully acknowledges the financial support of the University Medical Center Groningen (UMCG), Graduate School of Medical Sciences (GUIDE) and University of Groningen (RUG) for printing the thesis.

Lipotoxicity in Non-alcoholic Fatty Liver Disease: Mechanisms and Prevention in Experimental Models

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 25 August 2020 at 11.00 hours

by

Yana Geng

born on 27 February 1990
in Shaanxi, China

Supervisors

Prof. A.J. Moshage

Prof. K.N. Faber

Co-supervisor

Dr. J. Blokzijl

Assessment Committee

Prof. J. Fernandez-Checa

Prof. A.J.A. van de Sluis

Prof. M. Schmidt

*To the lives sacrificed due to these studies,
may we deserve it.*

TABLE OF CONTENT

CHAPTER 1	- 9 -
Introduction to the thesis	
CHAPTER 2	- 17 -
Lipotoxicity in non-alcoholic fatty liver diseases: Mechanisms and clinical implications	
CHAPTER 3	- 45 -
Protective effect of metformin against palmitate-induced hepatic cell death	
<i>Biochim Biophys Acta Mol Basis Dis, 2020. 1866(3): p. 165621.</i>	
CHAPTER 4	- 71 -
Hesperetin protects against palmitate-induced cellular toxicity via induction of GRP78 in hepatocytes	
CHAPTER 5	- 89 -
Differential toxicity of oleate and palmitate on liver sinusoidal endothelial and vascular endothelial cells <i>in vitro</i>	
CHAPTER 6	- 111 -
Chemical Hypoxia induces pro-inflammatory signals in fat-laden hepatocytes and contributes to cellular crosstalk with Kupffer cells through extracellular vesicles	
<i>Biochim Biophys Acta Mol Basis Dis, 2020. 1866(6): p. 165753.</i>	
CHAPTER 7	- 143 -
Conditioned medium of hepatic stellate cells induces an inflammatory phenotype in Kupffer cells via the release of extracellular vesicles	
CHAPTER 8	- 163 -
Summary and perspectives	
APPENDIX.....	- 171 -
Nederlandse samenvatting	- 172 -
