Supply chain design and planning for LNG as a transportation fuel

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Thursday 3 September 2020 at 14.30 hours

by

José Alejandro López Álvarez

born on 13 February 1988
in Bogotá, Colombia

Supervisor

Prof. I.F.A. Vis

Co-supervisors

Dr. ir. P. Buijs

Dr. O.A. Kilic

Assessment committee

Prof. B.F. Heidergott

Prof. D. Huisman

Prof. J. Riezebos

Contents

1	Introduction	1
1.1	Infrastructure development of an LNG distribution network	4
1.2	Management of LNG inventories considering quality	6
1.3	Journal publications	9
2	Strategic decision-making in expanding supply chains for LNG as a Fuel	11
2.1	Introduction	11
2.2	Formal description and mathematical formulation	14
2.3	Solution algorithm	22
2.3.1	Description of the variable MIP neighborhood descent algorithm	22
2.3.2	Improvement opportunities	22
2.3.3	Applying the improved VMND to the 2E-CLRPSP	24
2.4	Computational experiments	26
2.4.1	Experimental design	26
2.4.2	Sensitivity analysis on the time limit and optimality gap parameters of the local search	26
2.4.3	Computational results	29
2.5	Case study	32
2.5.1	Results	35
2.5.2	Sensitivity analysis	36
2.6	Conclusions	37
3	Multiple-supplier inventory control for deteriorating and mixable substances	39
3.1	Problem description	41

3.2	Model	41
3.3	Partial characterization of the optimal policy	43
3.3.1	Case with a predominant supplier	43
3.3.2	Case with no predominant supplier	44
3.3.3	Case where there is no predominant supplier and all suppliers are self-sufficient	47
3.4	Numerical example	49
3.5	Conclusions and further research	51
4	Dynamic lot-sizing with multiple suppliers for deteriorating and mixable substances	53
4.1	Introduction	53
4.2	Problem description	56
4.3	Model formulation	58
4.4	Heuristic approaches	60
4.4.1	0MIX heuristic	61
4.4.2	1MIX heuristic	62
4.5	Numerical study	64
4.5.1	Experimental design	64
4.5.2	Analysis of the effect of the discretization precision on the per- formance of the radix-based discretization technique	66
4.5.3	Numerical results	67
4.6	Conclusions	69
5	An inventory control policy for liquefied natural gas as a transportation fuel	75
5.1	Introduction	75
5.2	Problem description	78
5.3	Model formulation	80
5.3.1	MDP implementation	83
5.4	Illustrative example of an optimal policy	83
5.5	Special cases	89
5.6	Definition of an inventory policy	90
5.7	Numerical study	91
5.7.1	Performance of the (S, s, v, k) policy	91

5.7.2	Sensitivity analysis of the optimal expected profit	98
5.8	Conclusions and future research	101
6	Discussion and future research	105
6.1	Infrastructure development of the LNG distribution network	105
6.2	Management of LNG inventory considering quality	107
6.2.1	Modeling considerations	108
6.2.2	Discussion and future research	110
6.3	Integration of network design and inventory management of LNG in- ventories considering quality	112
7	Conclusions	115
	Summary	127
	Summary in Dutch	131
