Role of quantitative and gated myocardial perfusion PET imaging

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 21 September 2020 at 18.00 hours

by

Andrea De Guadalupe Monroy Gonzalez

born on 14 August 1990
in Mexico City, Mexico

SUPERVISORS

Prof. R.H.J.A. Slart

Prof. E. Alexanderson

Co-supervisors

Prof. R.A. Tio

Prof. N.H.J. Prakken

Assessment Committee

Prof. A.A. Voors

Prof. R. Boellaard

Prof. L. Stegger

CONTENTS

Part I: Introduction

Chapter 1	General introduction: PET/CT with ^{13}N -ammonia	11

Part II: Quantitative myocardial perfusion imaging

Chapter 2	Software reproducibility of myocardial blood flow and flow reserve quantification in ischemic heart disease: A ^{13}N -ammonia PET study	24
Chapter 3	Long-term prognostic value of quantitative myocardial perfusion in patients with chest pain and normal coronary arteries	48
Chapter 4	Myocardial bridging of the left anterior descending coronary artery is associated with reduced myocardial flow reserve: A ^{13}N -ammonia PET study	68
Chapter 5	Relationship between transmural attenuation gradient and quantitative myocardial perfusion: A proof of concept study with ^{13}N -ammonia PET	92

Part III: Ventricular synchrony

Chapter 6	Phase analysis of gated PET in the evaluation of mechanical ventricular synchrony: A narrative overview	114
Chapter 7	Ventricular synchrony is not significantly determined by absolute myocardial perfusion in patients with chronic heart failure: A ^{13}N - ammonia PET study	134

Part IV: Overview and discussion

Chapter 8	Concluding remarks and future perspectives	158
Chapter 9	Summary	168
Chapter 10	Nederlandse samenvatting	172

Part V: Appendices

Chapter 11	Acknowledgments	180
Chapter 12	Curriculum vitae	186
Chapter 13	List of publications	190
