RARE CHOLESTATIC CHILDHOOD DISEASES

Advances in clinical care

The research described in this thesis was financially supported by the University Medical Centre Groningen, the University of Groningen, the European Society for Paediatric Gastroenterology, Hepatology and Nutrition, and by unrestrictive research grants from Albireo and Mirum Pharmaceuticals.

Printing of this thesis was financially supported by Ausnutria, Nestlé Health Science, Noord Negentig, Zambon Pharma, the University Medical Centre Groningen, the University of Groningen and the Graduate School of Medical Sciences.

Their support is kindly acknowledged.

CONTENT

Chapter 1	Introduction and outline of thesis	11
PART I - Biliary atresia		39
Chapter 2	Prognosis of biliary atresia after 2-year survival with native liver: a nationwide cohort analysis	41
Chapter 3	Preterm infants with biliary atresia: a nationwide cohort analysis from the Netherlands	57
Chapter 4	A higher incidence of isolated biliary atresia in rural areas: results from an epidemiological study in the Netherlands	71
Chapter 5	The gut microbiota composition of patients with biliary atresia prior to kasai portoenterostomy is associated with clearance of jaundice	91

PART II – Progressive Familial Intrahepatic Cholestasis	119
Chapter 6 Genotype correlates to the natural history of severe bile salt export pump deficiency	121
Chapter 7 Predictability of the disease course in patients with compound heterozygous <i>ABCB11</i> mutations and residual bile salt export pump function	171
Chapter 8 Impact of genotype serum bile acid concentrations and surgical biliary diversion on native liver survival in FIC1 deficiency – natural history data from the NAPPED Consortium	193
Chapter 9 General discussion and future perspectives	221
