Polyploidy and host
specificity genetics in
Nasonia parasitoid wasps

Kelley Leung

This research was conducted at the Groningen Institute for Evolutionary Life Sciences (GELIFES) of the University of Groningen (the Netherlands) under the requirements of the Graduate School of Science (Faculty of Science and Engineering). It was funded by the EU Marie Skłodowska-Curie Initial Training Network, Breeding Invertebrates for Next Generation Biological Control (BINGO) (Project number 641456).

Polyploidy and host specificity genetics in *Nasonia* parasitoid wasps

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 13 October 2020 at 11:00 hours

by

Kelley Leung

born on 23 July 1989
in Chicago, Illinois, USA

Supervisor

Prof. L.W. Beukeboom

Co-supervisor

Dr. L. van de Zande

Assessment Committee

Prof. K. Hopper

Prof. J.C. Billeter

Prof. J.R. Gadau

Table of Contents

Chapter 1

Introduction.....	1
-------------------	---

Chapter 2

Life-history traits of the Whiting polyploid line of the parasitoid <i>Nasonia vitripennis</i>	19
--	----

Chapter 3

Different polyploidization modes reveal major phenotypic variation in the parasitoid wasp <i>Nasonia vitripennis</i>	41
--	----

Chapter 4

Effects of polyploidy on biocontrol-related traits in the non-CSD parasitic wasp <i>Nasonia vitripennis</i>	63
---	----

Chapter 5

Delineation of the <i>Nasonia</i> host specificity gene <i>host preference 1</i> to an odorant-receptor enriched region	87
---	----

Chapter 6

Discussion	129
------------------	-----

References	145
------------------	-----

Summary	163
---------------	-----

Samenvatting	169
--------------------	-----

Acknowledgments.....	175
