ISSN: 1570-1530

The work described in this thesis was performed in the research group Physics of Nanodevices of the Zernike Institute for Advanced Materials at the University of Groningen, the Netherlands. This work has received funding from Dieptestrategie funding from the Zernike Institute for Advanced Materials, Core Project 1 and 2 of the European Union Horizon 2020 research and innovation programme and NWO Spinoza prize awarded to Prof. B. J. van Wees by the Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO).

Cover page design: Bhoomika Patel Bettadahalli Gangadharaiiah

Cover art: The spinning top represents the electron spin travelling in a two-dimensional graphene (hexagon pattern) reported in this PhD thesis as spin transport studies in single and bi-layer graphene.

Charge and spin transport in two-dimensional materials and their heterostructures

PhD Thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 23 October 2020 at 11.00 hours

by

Madhushankar Bettadahalli Nandishaiah

born on 9 June 1989
in Bengaluru, India

Supervisor

Prof. B.J. van Wees

Co-supervisor

Prof. C.H. van der Wal

Assessment committee

Prof. S.P. Dash

Prof. M.A. Stöhr

Prof. J. Ye

dedicated to Amma, Appaji and Apoorva

Contents

1	Introduction.....	1
1.1	Scaling of field-effect transistors	2
1.2	Two-dimensional materials	2
1.2.1	Graphene	3
1.2.2	Germanane.....	3
1.3	Spintronics	3
1.3.1	Graphene spintronics	4
1.3.2	Spintronics with graphene-TMD heterostructures.....	5
1.4	Outline of the thesis	6
2	Two-dimensional materials	13
2.1	Germanane	14
2.2	Graphene	14
2.3	Transition metal di-chalcogenides.....	15
2.4	Graphene-TMD heterostructure.....	16
3	Theory of electronic and spin transport in two-dimensional materials	19
3.1	Electronic transport in 2-dimensional materials	20
3.2	Charge and spin current.....	20
3.3	Metal oxide semiconductor field-effect transistor.....	21
3.3.1	Graphene FET	22
3.4	Spin injection into non-magnetic materials.....	23
3.4.1	Two-channel model	24
3.4.2	Conductivity mismatch and contact-induced spin relaxation	25

3.5	Spin transport in graphene.....	25
3.5.1	Spin diffusion equation.....	26
3.5.2	Non-local spin-valve measurement	26
3.5.3	Hanle spin precession measurement.....	30
3.6	Spin relaxation in graphene.....	35
3.6.1	Elliot-Yafet (EY) mechanism	35
3.6.2	D'yakonov-perel mechanism.....	35
3.6.3	Hyperfine interaction.....	35
3.6.4	Rashba spin-orbit coupling.....	36
3.7	Spin-orbit interaction in single and bilayer graphene in the proximity of TMD	36
3.7.1	Spin-orbit interaction in single-layer graphene	36
3.7.2	Spin-orbit coupling in single-layer graphene in the proximity of TMD	37
3.7.3	Spin-orbit coupling in bi-layer graphene	39
3.7.4	Spin-orbit coupling in BLG in the proximity of TMD	40
3.8	Spin absorption at the TMD/graphene interface.....	40
4	Experimental methods.....	45
4.1	Sample preparation.....	46
4.1.1	Substrate preparation	46
4.1.2	Mechanical exfoliation	48
4.1.3	Optical image	49
4.1.4	Atomic force microscopy	50
4.1.5	Pickup and transfer technique.....	50
4.1.6	Electron beam lithography.....	53
4.1.7	Electrode deposition and lift off	54

4.1.8	Wire bonding.....	55
4.2	Electrical measurements.....	55
4.2.1	Charge and spin transport.....	57
5	Electronic properties of germanane field-effect transistors.....	61
5.1	Introduction	62
5.2	Device fabrication and characterization	62
5.3	Measurement	63
5.4	Conclusion	68
5.5	Supplementary information.....	69
6	Study of proximity-induced SOC and anisotropic spin relaxation in single layer graphene – multi-layer WSe ₂ van der Waals heterostructures.....	79
6.1	Introduction	80
6.2	Device fabrication and characterisation	81
6.3	Measurements	82
6.3.1	In-plane spin transport in the graphene region under and near the WSe ₂ covered region.....	84
6.3.2	Spin relaxation anisotropy in the graphene region under and near the WSe ₂ covered region.....	89
6.3.3	Nonhomogeneous Bloch-diffusion model with spin lifetime anisotropy ..	94
6.4	Conclusion	96
6.5	Supplementary information.....	97
7	Large spin-relaxation anisotropy in bilayer-graphene/ WS ₂ heterostructures	113
7.1	Introduction.....	114
7.2	Device fabrication and measurements.....	115
7.3	Results and discussion.....	116

7.4	Conclusion	120
7.5	Supplementary information.....	122
8	Study of proximity induced SOC in WSe ₂ /bi-layer graphene heterostructures.....	139
8.1	Introduction	140
8.2	Device fabrication and characterisation	141
8.3	Results.....	142
8.4	Conclusion	150
8.5	Supplementary information.....	151
9	Conclusion	157
9.1	Conclusion	158
	Summary.....	161
	Samenvatting	165
	ಸಾರಾಂಶ.....	169
	Acknowledgement	175
	Publication list	183
	Resume	185
