Sustainable pathways to bio-based amines *via* the 'hydrogen borrowing' strategy

Anastasiia Afanasenko

First edition, October 2020

The work described in this thesis was carried out at the Stratingh Institute for Chemistry, University of Groningen, Groningen, The Netherlands.

This work was financially supported by the European Research Council, ERC Starting Grant 2015 (CatASus) 638076, and it was a part of the research program Talent Scheme (Vidi) with project number 723.015.005, which is partly financed by the Netherlands Organization for Scientific Research (NWO).

Sustainable pathways to bio-based amines via the 'hydrogen borrowing' strategy

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 30 October 2020 at 11.00 hours

by

Anastasiia Afanasenko

born on 28 September 1993
in Saint Petersburg, Russia

Supervisors

Prof. K. Barta

Prof. S. Harutyunyan

Assessment Committee

Prof. J. G. Roelfes

Prof. J. S. M. Samec

Prof. N. Yan

Table of Contents

Chapter 1

Towards bio-based amines through ‘hydrogen borrowing’ methodology	11
1.1 Introduction	12
1.2 General considerations regarding the ‘hydrogen borrowing’ methodology: formation of C-N bonds	13
1.3 Shvo’s and Knölker’s complexes as metal-ligand bifunctional catalysts	14
1.4 Biomass-derived precursors for the synthesis of bio-based amines	16
1.4.1 Carbohydrate derivatives	16
1.4.2 Lignin derivatives	18
1.4.3 Triglycerides	19
1.4.4 Proteins	21
1.5. Conclusion	22
1.6 Outline of the thesis	23
1.7 References	24

Chapter 2

Efficient nickel-catalysed <i>N</i>-alkylation of amines with alcohols	31
2.1 Introduction	32
2.2 Results and discussion	32
2.2.1 Establishing an active NiNP catalyst system for <i>N</i> -alkylation of amines	32
2.2.2 Characterization and nature of the catalyst	34
2.2.3 <i>N</i> -alkylation of aniline with a wide range of alcohols	39
2.2.4 <i>N</i> -alkylation of a variety of amines with 1-butanol	41
2.3 Conclusion	42
2.4 Experimental section	43
2.4.1 General methods	43
2.4.2 Representative procedures	44
2.4.3. Spectral data of isolated compounds	45
2.5 References	59

Chapter 3

Ruthenium and Iron-catalysed decarboxylative <i>N</i>-alkylation of α-amino acids with alcohols: sustainable routes to pyrrolidine and piperidine derivatives	63
3.1 Introduction	64
3.2 Results and discussion	66
3.2.1 Establishing the decarboxylative <i>N</i> -alkylation methodology	66
3.2.2 Scope of the methodology	67
3.2.3 Construction of α -amino nitriles using an <i>N</i> -alkylation/ decarboxylation strategy	71
3.2.4 Mechanistic considerations for the decarboxylative <i>N</i> -alkylation of α -amino acids with alcohols	72
3.3 Conclusion	76
3.4. Experimental section	76
3.4.1 General methods	76
3.4.2 Representative procedures	77
3.4.3 Spectral data of isolated compounds	78
3.5 References	86

Chapter 4

Amination of β-hydroxyl acid esters <i>via</i> cooperative catalysis: enabling access to bio-based β-amino acid esters	91
4.1 Introduction	92
4.2 Results and discussion	94
4.2.1 Establishing the novel catalytic amination of β -hydroxyl acid esters	94
4.2.2 Role of the Brønsted acid additive	97
4.2.3 Scope of the methodology	100
4.2.4 Bio-based β -amino acid esters from 3-hydroxypropionates	103
4.3 Conclusion	104
4.4 Experimental section	104
4.4.1 General methods	104
4.4.2 Representative procedures	105
4.4.3 Spectral data of isolated compounds	107
4.5 References	122

Chapter 5

Modular synthetic strategies from lignin-derived platform chemicals to valuable nitrogen-containing products	127
---	------------

5.1 Introduction	128
5.2 Results and discussion	129
5.2.1 Establishment of reaction network towards the value-added chemicals	129
5.2.2 Highly efficient amination of lignin-derived alcohols <i>via</i> ‘hydrogen borrowing’ approach	132
5.2.3 Construction of seven-membered <i>N</i> -heterocycles in deep eutectic solvents	136
5.2.4 Evaluation of biological activity of lignin-derived tetrahydro-2-benzazepines	138
5.3 Conclusion	140
5.4 Experimental section	141
5.4.1 General methods	141
5.4.2 Representative procedures	143
5.4.3 Spectral data of isolated compounds	146
5.5 References	165

Chapter 6

Sustainable catalytic pathways toward high-value <i>N</i>-heterocycles from lignin-derived monomer	171
6.1 Introduction	172
6.2 Results and discussion	173
6.2.1 Synthesis of amino alkyl-phenol derivatives	174
6.2.2 Construction of tetrahydroisoquinolines in deep eutectic solvents	175
6.2.3 Construction of quinazolin-4(3H)-ones and 3-arylindoles	179
6.3 Conclusion	183
6.4 Experimental section	184
6.4.1 General methods	184
6.4.2 Representative procedures	185
6.4.3 Spectral data of isolated compounds	187
6.5 References	200

Chapter 7

Summary and Outlook	205
Samenvatting en Vooruitblik	212

Appendix – A

List of Abbreviations	A-1
------------------------------	------------

Appendix – B	
Short Biography	A-3

Appendix – C	
List of Publications	A-4

Appendix – D	
Acknowledgments	A-7
