Long-term effects of dietary lipid structure in early life

Studies in experimental models

Onne Ronda

The research described in this thesis was conducted at the department of Pediatrics, section Molecular Metabolism and Nutrition, University Medical Center Groningen, The Netherlands. The studies in this thesis were financially supported by Danone Nutricia Research; the NorthStar project.

Printing of this thesis was financially supported by the University of Groningen, and the Graduate School of Medical Sciences.

Cover Design: © Onne Ronda, using a multi-scale patch-matching algorithm for style transfer, developed by Dr. David Tschumperlé (CNRS Institute), using adipose tissue histology and the painting “Petite Baie de La Ciotat” (1907) by Georges Braque.

ISBN (print): 978-94-034-2584-9

ISBN (online): 978-94-034-2585-6

Fan Liu (刘帆)

What if we opened up the blinds and flew
away up to the skies? Let the snow and
wind and rain take away our sorrows and
pain.

-Raven's Jig (lyrics)

Contents

Chapter 1	General introduction Outline of the thesis	7
Chapter 2	Programming effects of an early life diet containing large phospholipid-coated lipid globules are transient under continuous exposure to a high-fat diet <i>British Journal of Nutrition 2019; 122: 1321-1328</i>	25
Chapter 3	Effects of an early life diet containing large phospholipid-coated lipid globules on hepatic lipid metabolism in mice <i>Submitted</i>	45
Chapter 4	An early life diet containing large phospholipid-coated lipid globules programs later life postabsorptive lipid handling in high-fat diet but not in low-fat diet-fed mice <i>Submitted</i>	67
Chapter 5	The impact of human milk cholesterol on the absorption of vitamin K ₁ <i>In preparation</i>	89
Chapter 6	Spontaneous liver disease in wild-type C57BL/6J OlaHsd mice fed semisynthetic diet <i>Submitted</i>	107
Chapter 7	General discussion and conclusion	149
