**Physiological consequences of protein translocation
stress in *Bacillus subtilis***

María Margarita Bernal-Cabas

The PhD research described in this thesis was performed in the laboratory of Molecular Bacteriology, Department of Medical Microbiology, of the University of Groningen and the University Medical Center Groningen, the Netherlands.

This research was financially supported by the by the People Programme (Marie Skłodowska-Curie Actions) of the European Union's Horizon 2020 Programme under REA grant agreement no. 642836, and the Graduate School of Medical Sciences of the University of Groningen.

Printing of this thesis was supported by the Graduate School of Medical Sciences of the University of Groningen.

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Wednesday 4 November 2020 at 09:00 hours

by

María Margarita Bernal-Cabas

born on 13 February 1988

in Bogotá, Colombia

Supervisor

Prof. J.M. van Dijk

Co-supervisor

Dr. G. Buist

Assessment committee

Prof. C. Robinson

Prof. A.J.M Driessen

Prof. O.P Kuipers

Paranymphs

Dr. Giorgio Gabarrini

Drs. Marina López-Álvarez

Dr. Suruchi Nepal

To my wonderful husband, Eric

Table of contents

Chapter 1	General introduction and scope of this thesis	1
Chapter 2	Functional association of the stress-responsive LiaH protein and the minimal TatAyCy protein translocase in <i>Bacillus subtilis</i> Published in <i>Biochimica et Biophysica Acta - Molecular Cell Research</i> . 1867 , 118719 (2020)	29
Chapter 3	In the Cave of Wonders – ¹⁵N metabolic labelling provides new insights in cell physiology during twin-arginine translocation in <i>Bacillus subtilis</i> Manuscript to be submitted	65
Chapter 4	Double trouble: <i>Bacillus</i> depends on a functional Tat machinery to avoid severe oxidative stress and starvation upon entry into a NaCl-depleted environment Manuscript under revision at <i>Biochimica et Biophysica Acta - Molecular Cell Research</i>	105
Chapter 5	Ariadne’s Thread in the Analytical Labyrinth of Membrane Proteins – Integration of Targeted and Shotgun Proteomics for Global Absolute Quantification of Membrane Protein Manuscript published in <i>Analytical Chemistry</i> . 91 , 11972–11980 (2019).	139
Chapter 6	Membrane modulation of super-secreting “midi<i>Bacillus</i>” expressing the major <i>Staphylococcus aureus</i> antigen – a mass-spectrometry based absolute quantification approach Manuscript published in <i>Frontiers in Bioengineering and Biotechnology</i> . 8 , 1–15 (2020).	161
Chapter 7	Summary and future perspectives	195
Chapter 8	Dutch summary (Nederlandse samenvatting)	207
Chapter 9	I. Acknowledgements	220
	II. List of publications	228
	III. Biography	229
