Novel Methods towards Rare Sugars Based on Site-Selective Chemistry

Ieng Chim (Steven) Wan

The work described in this thesis was executed at the Stratingh Institute for Chemistry, University of Groningen, the Netherlands.

The authors of this thesis wish to thank the Netherlands Organization for Scientific Research for funding.

Novel Methods towards Rare Sugars Based on Site-Selective Chemistry

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

dinsdag 5 januari 2021 om 11:00 uur

door

Ieng Chim Wan

geboren op 25 juni 1991
te Macau, China

Promotores

Prof. dr. A. J. Minnaard

Prof. dr. M. D. Witte

Beoordelingscommissie

Prof. dr. T. Noël

Prof. dr. G. A. van der Marel

Prof. dr. J. G. Roelfes

出淤泥而不染 --- 宋·周敦頤

Rising from the mud without a stain --- Zhou Dunyi

Table of Contents

Chapter 1. From common monosaccharide to rare monosaccharide: the use of site-selective reactions	1
Definition and basic facts of rare monosaccharides	2
The biological relevance of rare monosaccharides	3
Traditional approaches on the synthesis of rare monosaccharides vs. direct site-selective modifications.	5
Outline of this thesis	12
References	13
Chapter 2. C3-selective C-C bond formation in unprotected monosaccharides using photoredox catalysis	15
Introduction	16
Result and discussion	17
Conclusion.....	21
Experimental section	21
References	27
Chapter 3. C3-selective C-C bond formation: optimization and mechanistic study	29
Introduction	30
Result and discussion	32
The problem with incomplete conversion and the unexpected consumption of phenyl vinyl sulfone.....	32
Catalyst loading and conversion.....	44
The role of the solvent.....	48
Product isolation and purification	50
Conclusion.....	53
Experimental section	54
References	60
Chapter 4. From D- to L- monosaccharide derivatives via photodecarboxylation-alkylation.....	63
Introduction	64
Result and discussion	65

Conclusion	71
Experimental section	72
References	119
Chapter 5. From the synthesis of <i>N</i>-acetyl-L-talosaminuronic acid to the synthesis of <i>N</i>-acetyl-L-gulosamine via double epimerization	123
Introduction	124
Result and discussion	126
The start of the synthesis and the discovery of the unexpected product .	126
Optimization study for the production of guloside.....	130
Intermezzo; deuterium labelling.....	135
A re-investigation on the work up procedure	137
Conclusion.....	139
Work ad futurum	140
Experimental section	141
References	143
Chapter 6. On the origin of regioselectivity in palladium-catalyzed oxidation of glucosides	145
Introduction	146
Result and discussion	149
Conclusion.....	154
Experimental section	155
Computational details.....	155
Oxidation of carba-glucosides.....	162
References	164
Chapter 7. Summary.....	167
References	171
Nederlandse Samenvatting.....	173
Acknowledgement	179
Curriculum Vitae	183
