Exports, Income and Regional Inequality in China: Value Chain Analyses

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Thursday 14 January 2021 at 11.00 hours

by

Yuwan Duan

born on 1 October 1987
in Henan, China

Supervisors

Prof. H.W.A. Dietzenbacher
Prof. B. Los

Assessment Committee

Prof. J.H. Garretsen
Prof. N. Foster-McGregor
Prof. R.W. Jackson

ACKNOWLEDGMENTS

During the journey to get my PhD degree, many people have generously offered me great help, which makes me feel grateful. I would like to thank them, because without their help and support, there would have been no way for this dissertation to be completed.

This dissertation is the “Dutch part” of the double Ph.D. degree program offered by the University of Groningen in the Netherlands and the University of the Chinese Academy of Sciences (UCAS) in China. I would like to thank Jakob de Haan, Taco van der Vaart, Rian Drogendijk, Rina Koning, Hong Zhao, and Qian Wang, who initiated and organized this program. This program has opened a new chapter in my academic career and provides me with many memorable experiences. Most of all, the program has offered me the great opportunity of working closely with two great researchers that deeply affected my academic career: my advisors Prof. Erik Dietzenbacher and Prof. Bart Los.

Foremost, I would like to express my sincere gratitude to Erik and Bart for their continuous support of my Ph.D. study and research, and also their patience, enthusiasm, and persistent willingness to share their immense knowledge. Their advisorship and mentorship have helped me through the whole process of my PhD research. They taught me how to do good research, step by step, and helped me a lot with my thesis revision. Erik is a brilliant, talented, and humorous researcher. His brain is like a magic box and always offered me fresh ideas when I had no clue about my next step. Working with him has made me realize that academic research could be very joyful. The most frequent words that Erik spoke to me were “relax”, “be patient” and “quality is the most important”. These words not only guided me to complete this thesis, but also has been benefiting my whole academic career, and now I’m borrowing them to advise my own students. Special thanks to him! Bart is a very diligent, knowledgeable, and productive researcher. One of my colleagues used to call him jokingly as part of the “furniture in the office” because he always works late in the office. He always gave constructive suggestions to my papers and helped me to eliminate inaccuracies in my research, which greatly helped the rigour of this thesis. He is warm-hearted, and always generous to offer his help. He has been a role model for me with his passion for research, preciseness,

and perseverance. Even though two years is not very long in my whole career, the two years working with them in Groningen has been one of the most important stages in my career and life.

Also, sincere and deep gratitude goes to my advisors in China: Prof. Xikang Chen and Prof. Cuihong Yang. Prof. Chen is a distinguished professor and a great expert in Chinese input-output analysis. His abundant experience in Chinese economic development helped me to build insightful understanding of China's economic issues and solid foundation in input-output analysis. Prof. Yang is the mentor who introduced me to scientific research and input-output analysis. She taught me how to do research hand by hand and guided me in growing from a freshman who knew almost nothing about research to a mature explorer that is committed to academic research. Her open-mind has given me the luxury to choose the areas that I was interested in. She is a great supervisor and also a reliable friend. I am grateful to Prof. Chen and Prof. Yang for their endless help and support.

I would like to thank the committee of my thesis: Prof. J.H. Garretsen (from the University of Groningen), Prof. N. Foster-McGregor (from the United Nations University in Maastricht), and Prof. R.W. Jackson (from West Virginia University in Morgantown), for their positive feedback and support of my research.

I would like to express my gratitude to SOM staff and GEM secretaries. Many thanks to Rina Koning, Hanneke Tamling, Arthur de Boer, Justin Drupsteen, Ellen Nienhuis, Herma van der Vleuten, Jenny Hill, and Sylvia Luiken, for their excellent administrative support during my Ph.D. studies. I also would like to thank the professors in the Faculty of Economics and Business (FEB): Gaaitzen de Vries, Marcel Timmer, Robert Inklaar and Bert Steenge for their useful comments and suggestions since the beginning of my Ph.D. project; and to my colleagues in FEB: Addisu Lashitew, Abdella Oumer, Matías Piaggio, and Hengki Purwoto. It has really been a pleasure to talk with them during lunch and coffee breaks.

Special thanks go to my colleagues and friends in CUFÉ. I have thoroughly enjoyed the time participating in seminars, discussions, and collaborations with them. Their help allowed me to continue doing research and complete the thesis. Sincere thanks for their generous help in my work go to my friends at CAS: Xuemei Jiang, Xinru Li, Yifang Liu, Jiansuo Pei, Kailan Tian, Huijuan Wang, Xia Yan, Zhuoying

Zhang and Kunfu Zhu.

I also owe many thanks to my dear friends during the time in Groningen: Maoling Bu, Yingdan Cai, Quanrun Chen, Wen Chen, Jiasi Fan, Xin Fan, Feng Hu, Junping Hou, Zhongbo Jing, Suxiao Li, Xiaoyi Liu, Ye Liu, Zhong Ma, Jiquan Wu, Chengyong Xiao, Yan Xu, Bingqian Yan, Qingkai Yang, Tao Yuan, Jiyuan Wang, Xiao Wang, Lu Zhang, Yanping Zhao, and Tao Zhu. We have happily spent a lot of time together, hanging out, travelling, and many other things. I missed the time with all of you in the Netherlands very much. Special thanks to my dear friends Cong Lu, Jin Huang, and Cong Ye. You are always the first to offer me your generous help and support when I encounter difficulties. I have also benefited from the help from many other individuals. I express my gratitude to them though without listing all of their names.

Last but not the least, I would like to thank my whole family. I am grateful to my parents, for giving birth to me in the first place and supporting me spiritually throughout my life. Special thanks to my husband Yijie, for always supporting me, encouraging me, and always being there for me. Thanks to my little daughter Zixi: you are the source of my happiness and give me the power to work hard.

DUAN, Yuwan

CONTENTS

CHAPTER 1	1
Introduction	1
1.1 The global trade pattern and the role of China.....	1
1.2 The role of exports in China's economy: stylized facts.....	6
1.3 Outline of the thesis	10
CHAPTER 2	17
Why Has China's Vertical Specialization Declined?	17
2.1 Introduction.....	17
2.2 Measurement of the VS share	20
2.2.1 Overview	20
2.2.2 The traditional HIY method	21
2.2.3 The tripartite method.....	22
2.3 Estimation of China's annual VS shares.....	24
2.4 Decomposition of the VS share	28
2.4.1 A brief introduction to structural decomposition analysis	28
2.4.2 Overall decomposition of the changes in the VS share	29
2.4.3 Decomposing the VS share by production type.....	32
2.5 Empirical results	35
2.5.1 The aggregate results	35
2.5.2 Changes in the input structure.....	37
2.5.3 The export structure	41
2.5.4 A robustness check.....	43
2.6 Conclusion	44
Appendix.....	46
CHAPTER 3	55
How Much Did China's Emergence as "The World's Factory" Contribute to its National Income?	55

3.1 Introduction.....	55
3.2 Methodology.....	58
3.2.1 Deriving national income in exports from a tripartite input-output table	58
3.2.2 Estimating national income and foreign income shares in domestic value added	62
3.3 Data	64
3.4 Results: National income in China's exports.....	67
3.4.1 Aggregate national income in exports.....	67
3.4.2 National income in exports by specific industries	69
3.4.3 Sensitivity analyses	71
3.5 Results: Accounting for changes in the national income share in exports.....	76
3.5.1 Decomposition methodology	76
3.5.2 Decomposition results	78
3.6 Dependence of China's national income on exports.....	80
3.7 Conclusions.....	82
Appendix.....	85
CHAPTER 4.....	97
Processing Trade in Chinese Interregional Input-Output Tables: Construction and Application.....	97
4.1 Introduction.....	97
4.2 Framework of the IRIOP table.....	100
4.3 Construction of the IRIOP table.....	102
4.3.1 Overview of available information	102
4.3.2 Inconsistency issues and some underlying principles.....	104
4.3.3 The construction methodology.....	107
4.4 Separating processing exports from ordinary production matters	113
4.4.1 Methodology	114
4.4.2 Empirical results	116
4.5 Conclusions.....	122
Appendix.....	124

CHAPTER 5	149
China's Rise as An Export Giant and Regional Inequality: A Value Chain Analysis	
.....	149
5.1 Introduction.....	149
5.2 China's regional income inequality	151
5.2.1 China's regional income and export activities.....	152
5.2.2 China's regional income inequality	153
5.3 Methodology.....	157
5.3.1 Tracing value chains	157
5.3.2 Decomposing regional inequality by source.....	162
5.4 Data	164
5.5 Empirical results	165
5.5.1 Labor income earned in value chains.....	166
5.5.2 Importance of exports to labor income	168
5.5.3 Contribution of exports to regional inequality.....	171
5.6 Conclusions.....	177
CHAPTER 6	179
Summary and Conclusions.....	179
6.1 Introduction.....	179
6.2 Summary of the main findings.....	180
6.3 Limitations and further research	183
Bibliography	189
Samenvatting	199

LIST OF TABLES

Table 2.1 The schematic outline of China's tripartite input-output table	23
Table 2.2 Summary of the components in the structural decomposition analysis	35
Table 2.3 The decomposition of China's VS share (unit: %)	36
Table 2.4 Contributions of changes in trade mode and in commodity composition to the change	42
Table 2.5 The export shares of the top 10 export industries (as % of total exports)....	43
Table 2.6 The decomposition of China's VS share on constant price IO tables (unit:%)	44
Table 3.1 Value composition of exports (2002-2012), in %	68
Table 3.2 National income shares in exports (2002-2012), selected industries, in % .	70
Table 3.3 National income shares in exports adjusted for round-tripping of FDI, in %	73
Table 3.4 National income share in exports adjusted for round-tripping of imports, in %	76
Table 3.5 Decomposition results of changes in the national income share in exports (in %-points)	79
Table 3.6 Dependence of China's GNI and GDP on final demand categories (%)	81
Table 4.1 Distribution of processing exports across regions, 2002 - 2012	99
Table 4.2 Schematic outline of the IRIOP table (2-region case).....	101
Table 4.3 National value added embodied in 1000 rmb of regional exports: a comparison between using the IRIOP table and the aggregated IRIOP table.....	117
Table 4.4 Regional value added generated by national exports: a comparison between using the IRIOP table and the aggregated IRIOP table.....	119
Table 4.5 Regional value added from spillover effects of other regions' exports: a comparison between using the IRIOP table and the aggregated IRIOP table.....	121
Table 5.1 Regional labor incomes and distribution of exports (in 1,000RMB per capita, in current prices)	152

Table 5.2 Labor income shares in the domestic stages of the production of ordinary exports of East Coast textiles (% of exports).....	159
Table 5.3 Labor income shares of final products, by type (in %).....	167
Table 5.4 Shares of regional labor income induced by three types of final demand (%).....	169
Table 5.5 Contribution of types of final products to regional income inequality	172
Table 5.6 Contribution of sectoral exports to regional income inequality caused by all exports, 2012.....	173
