Novel proton and metal-ion conducting polymers and block copolymers

Marco Viviani

PhD Thesis

University of Groningen

February 2021

Zernike Institute for Advanced Materials Ph.D. thesis series 2021-05

ISSN: 1570-1530

The work described in this thesis was performed in the research group Macromolecular Chemistry and New Polymeric Materials at the University of Groningen, the Netherlands. This work was financially supported by the Zernike Institute for Advanced Materials.

Novel proton and metal-ion conducting polymers and block copolymers

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 16 February 2021 at 11.00 hours

by

Marco Viviani

born on 5 July 1987
in San Miniato, Italy

Supervisor

Prof. K. Loos

Co-supervisor

Dr. G. Portale

Assessment Committee

Prof. M.M.G. Kamperman

Prof. F. Picchioni

Dr. Habil. C. Iojoiu

Table of Contents

Chapter 1

Introduction	1
1.1. Proton-conducting polymers and solid polymer electrolytes	7
1.2. Proton Exchange Membrane Fuel Cells (PEMFC)	8
1.2.1. Proton conduction mechanism in hydrated acid membranes	11
1.2.2. Low-temperature proton exchange membrane (LT-PEM).....	13
1.2.3. Intermediate temperature proton exchange membrane (IT-PEM).....	21
1.2.3.1. Sulfonated poly(phenylene sulfide sulfones) (sPSS) and sulfonated polyphenylene sulfone (sPSO2) promising ionomer candidates	23
1.2.3.2. Sulfonated aromatic block copolymers (sABCP).....	29
1.2.4. High-temperature proton exchange membrane (HT-PEM).....	37
1.2.5. Proton conduction mechanism in PBI-PA polymer electrolytes systems	38
1.3. Solid polymer electrolytes for lithium and magnesium batteries	49
1.3.1. Ion conduction mechanism in SPE.....	50
1.3.2. General requirements for SPE.....	53
1.3.3. Lithium solid polymer electrolytes	57
1.3.4. Magnesium solid polymer electrolytes.....	63
1.3.5. Alternative chemistries.....	65
1.4. Aim of the present work.....	67
1.5. References.....	69

Chapter 2

Structural transitions during film formation of proton conducting polymers.....	85
2.1. Introduction.....	86
2.2. Experimental section.....	87
2.3. Results and discussion.....	92
2.4. Conclusions.....	105

2.5. References.....	116
Chapter 3	
Proton conducting ABA triblock copolymers with sulfonated poly(phenylene sulfide sulfone) midblock obtained via copper-free thiol-click chemistry.....	119
3.1. Introduction.....	120
3.2. Experimental Section	121
3.3. Results and Discussion.....	128
3.4. Conclusions.....	141
3.5. References.....	143
Chapter 4	
Highly stable membranes of poly(phenylene sulfide benzimidazole) cross-linked with polyhedral oligomeric silsesquioxanes for high-temperature proton transport	147
4.1. Introduction.....	148
4.2. Experimental section.....	150
4.3. Results and discussion.....	154
4.4. Conclusions.....	166
4.5. References.....	168
Chapter 5	
Lithium and magnesium polymeric electrolytes using poly(glycidyl ether)-based polymers with short grafted chains	173
5.1. Introduction.....	174
5.2. Experimental section.....	176
5.3. Result and discussion	179
5.4. Conclusions.....	189
5.5. References.....	191
Summary.....	195
Samenvatting.....	199
Acknowledgements.....	203
