Novel Approaches for Developing Small Molecules to Target Histone Deacetylases

Fangyuan Cao

2021

The research described in this thesis was carried out in the Department of Chemical and Pharmaceutical Biology (Groningen Research Institute of Pharmacy, University of Groningen, The Netherlands) and was financially supported by the China Scholarship Council.

The research work was carried out according to the requirement of the Graduate School of Science Faculty of Science and Engineering, University of Groningen, The Netherlands.

Printing of this thesis was financially supported by the University Library and the Graduate School of Science, Faculty of Science and Engineering, University of Groningen, The Netherlands.

Cover design: Fangyuan Cao

Printing: Ridderprint

Novel Approaches for Developing Small Molecules to Target Histone Deacetylases

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 23 February 2021 at 11.00 hours

by

Fangyuan Cao

born on 24 April 1990
in Changchun, China

Supervisors

Prof. F.J. Dekker

Prof. G.J. Poelarends

Assessment Committee

Prof. A.S.S. Dömling

Prof. P.H. h. Elsinga

Prof. R.J. Pieters

To my family and friends

Contents

Chapter 1

Introduction and scope of the thesis	9
--	---

Chapter 2

The process and strategy for developing selective histone deacetylase 3 Inhibitors	31
--	----

Chapter 3

Inhibitory selectivity among class I HDACs has a major impact on inflammatory gene expression in macrophages	57
--	----

Chapter 4

Induced protein degradation of histone deacetylases 3 (HDAC3) by proteolysis targeting chimera (PROTAC).....	95
--	----

Chapter 5

HDAC/MIF dual inhibitor inhibits NSCLC cell survival and proliferation by blocking the AKT pathway	133
--	-----

Chapter 6

Summary and future perspectives	161
---------------------------------------	-----
