tRNA mimicking structures to control and monitor biological processes

Avishek Paul

PhD thesis

University of Groningen

Zernike Institute PhD thesis series 2021-09

ISSN: 1570-1530

ISBN:

ISBN:

The research described in thesis was performed in Polymer Chemistry and Bioengineering group at Zernike Institute for Advanced Materials, University of Groningen, the Netherlands and DWI—Leibniz Institute for Interactive Materials, Aachen, Germany. This work was financially supported by European Research Council (ERC).

tRNA mimicking structures to control and monitor biological processes

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 23 April 2021 at 11.00 hours

by

Avishek Paul

born on 13 October 1985
in
Malda, India

Supervisor

Prof. A. Herrmann

Co-supervisor

Prof. P. van Rijn

Assessment Committee

Prof. A. Guskov

Prof. F. Simmel

Prof. W. Weber

Dedicated to my parents and sister.

CONTENTS

Chapter 1: General introduction

1.1. Introduction.....	2
1.2. Functional units of a genetic switch.....	3
1.3. Bacterial sensor with embedded read out system: a different form of RNA switch.....	8
1.4. Optimizing switch response.....	11
1.5. Importance of different regulators, other than riboswitch, with different regulatory mechanisms.....	14
1.6. Genetic switches v 2.0.....	17
1.7. Applications of synthetic genetic switches.....	20
1.8. Thesis motivation and overview.....	21

Chapter 2: Modular and versatile *trans*-encoded genetic switches

2.1. Introduction.....	37
2.2. Results and discussion.....	38
2.3. Conclusion.....	46
2.4. Experimental section.....	47

Chapter 3: Photochemical control of bacterial gene expression based on *trans* encoded genetic switches

3.1. Introduction.....	85
3.2. Results and discussion.....	88
3.3. Conclusion.....	100
3.4. Experimental section.....	101

Chapter 4: A DNA based trans-encoded genetic switch

4.1. Introduction.....	121
4.2. Results and discussion.....	122
4.3. Conclusion.....	129
4.4. Experimental section.....	129

Chapter 5: Modularity from RNA aptamers combined with the green fluorescent protein provides versatile genetically encoded fluorescent sensors in bacteria

5.1. Introduction.....	141
5.2. Results and discussion.....	142
5.3. Conclusion.....	152
5.4. Experimental section.....	152

Chapter 6: Outlook and future perspectives.....165

Chapter 7: Summary.....168

Chapter 8: Samenvatting.....172
