Interactions between DNA damage and metabolism

by

Ana Patricia Huerta Guevara

The research described in this thesis was primarily conducted at the Department of Pediatrics, Section Molecular Metabolism and Nutrition, University Medical Center Groningen, The Netherlands. This project received funding from the Mexican National Council of Science and Technology (CONACyT), and the Jan Kornelis de Cock stichting.

Printing of this thesis was financially supported by the University of Groningen, the University Medical Center Groningen, the Graduate School of Medical Sciences, research Institute for Drug Exploration (GUIDE) and University of Groningen Library.

Huerta Guevara, Ana Patricia

Interactions between DNA damage and metabolism

PhD dissertation, University of Groningen, The Netherlands

Interactions between DNA damage and metabolism

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Wednesday 6 May 2020 at 12.45 hours

by

Ana Patricia Huerta Guevara

born on 9 May 1988
in Huamantla, Mexico

Supervisor

Prof. J.W. Jonker

Co-supervisor

Dr. J.K. Kruit

Table of contents

CHAPTER 1	General Introduction	11
CHAPTER 2	Increased insulin sensitivity and diminished pancreatic beta-cell function in DNA repair deficient <i>Ercc1</i> ^{d/-} mice	35
CHAPTER 3	Failure to repair endogenous DNA damage in beta-cells causes adult onset diabetes	55
CHAPTER 4	Partial deficiency in <i>Ercc1</i> expression in beta-cells is associated with impairments in glucose metabolism	87
CHAPTER 5	Mice with a hepatocyte-specific deletion of nuclear receptor TR4 (Nr2c2) display normal glucose homeostasis and a mild high-fat diet-induced dyslipidemia	109
CHAPTER 6	General Discussion and perspective	137
	Appendices	153
