Known and unknown functions of TET dioxygenases: the potential of inducing DNA modifications in Epigenetic Editing

Hui Chen

The studies described in this thesis were financially supported by:

Netherlands Organisation for Scientific Research NWO-VIDI

University Medical Center Groningen (Abel Tasman fellowship)

The National Key R&D Program of China

The National Science Foundation of China

Shanghai Municipal Science and Technology Project

Chinese Academy of Sciences

Printing of this thesis was financially supported by:

University of Groningen

University Medical Center Groningen

Cover design: Hui Chen

Lay-out: Hui Chen

Known and unknown functions of TET dioxygenases: the potential of inducing DNA modifications in Epigenetic Editing

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga,
en volgens besluit van het College voor Promoties.
De openbare verdediging zal plaatsvinden op
woensdag 16 Juni 2021
om 9.00 uur

door

Hui Chen

geboren op 14 October 1983
te Hubei, China

TABLE OF CONTENTS

CHAPETR 1	General introduction to the thesis	9
CHAPTER 2	Targeting putative DNA demethylases and known histone modifying enzymes specifically to endogenous genes	37
CHAPTER 3	Induced DNA demethylation by targeting Ten-Eleven Translocation 2 to the human ICAM-1 promoter <i>Nucleic Acids Research: (2014) 42, 1563-1574</i>	59
CHAPTER 4	A vitamin-C-derived DNA modification catalyzed by an algal TET homologue <i>Nature: (2019) 569, 581-585</i>	89
CHAPTER 5	Microhomology-mediated knock-in of donor DNA precisely in the genome of <i>Chlamydomonas</i> using Cas9-gRNA ribonucleoproteins <i>Manuscript under submission</i>	133
CHAPTER 6	Summary & General discussion and Future perspectives	173
APPENDIX 1	Nederlandse samenvatting	205
APPENDIX 2	List of publications	211
APPENDIX 3	Acknowledgements	213
APPENDIX 4	中文致谢	219
