Environment-host-microbe interactions shape human metabolism

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on
 Tuesday 22 June 2021 at 12.45 hours

by

Lianmin Chen

born on 23 November 1991
 in Jiangsu, China

Supervisors

Prof. J. Yang-Fu

Prof. F. Kuipers

Prof. A.P. Zhernakova

Assessment Committee

Prof. V.V.A.M. Knoers

Prof. M. Nieuwdorp

Prof. O.P. Kuipers

Propositions

Inter-individual variations in gut microbial composition associate with host health status. *(Zhernakova et al., Science, 2016)*

Gut microbial pathways can be linked to the cardiometabolic risk of the host. *(this thesis)*

Plasma bile acid profiles show large inter-individual variability in individuals with obesity. *(this thesis)*

Gut microbial genetic makeup shows long-term stability and individual specificity that can serve as a host fingerprint. *(this thesis)*

Gut microbial changes over time are related to changes in plasma metabolite levels in the host. *(this thesis)*

The levels of specific plasma metabolites are dominantly driven by different factors, including diet, microbiome and genetics, that vary from metabolite to metabolite. *(this thesis)*

Gut microbial interactions that are reflected by co-abundances show specificity in inflammatory bowel disease and obesity. *(this thesis)*

Research is what I'm doing when I don't know what I'm doing. *(Wernher von Braun)*

We cannot solve problems with the same thinking we used to create them. *(Albert Einstein)*

Content

Chapter 1	Introduction 1 <i>(Human Molecular Genetics, 2018)</i>
Chapter 2	Gut microbial associations to plasma metabolites linked to cardiovascular phenotypes and risk 15 <i>(Circulation Research, 2019, Cover story)</i>
Chapter 3	Genetic and microbial associations to plasma and fecal bile acids in obesity relate to plasma lipids and liver fat content 41 <i>(Cell Reports, 2020, Cover story)</i>
Chapter 4	Diet, genetics and gut microbiome determine human plasma metabolome. 64 <i>(Submitted, 2021)</i>
Chapter 5	The long-term genetic stability and individual specificity of the human gut microbiome 93 <i>(Cell, 2021, Cover story)</i>
Chapter 6	Gut microbial co-abundance networks show specificity in inflammatory bowel disease and obesity 124 <i>(Nature Communications, 2020, with “behind the paper”)</i>
Chapter 7	Discussion and perspective 151
Appendices	Summary 172 Acknowledgement 175 Curriculum vitae 177 Publications 178
