Air pollution exposure of lung models:

Focus on inflammation, oxidative stress and cyclic AMP signaling

The studies described in this thesis were performed within the framework of Molecular Pharmacology Department of University of Groningen and Institute of Biomedical Sciences, Federal University of Rio de Janeiro, and was financially supported by Brazilian Federal Agency for Support and Evaluation of Graduate Education (CAPES), Carlos Chagas Filho Foundation for Research Support in the State of Rio de Janeiro (FAPERJ).

The research work was carried out according to the requirements of the Graduate School of Science, Faculty of Science and Engineering, University of Groningen, The Netherlands.

Printing of this thesis was financially supported by the University Library and the Graduate School of Science, Faculty of Science and Engineering, University of Groningen, The Netherlands.

Air pollution exposure of lung models:

Focus on inflammation, oxidative stress and
cyclic AMP signaling

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 14 June 2021 at 18.00 hours

by

Isabella Cattani Pinto Cavalieri

born on 28 September 1989
in Rio de Janeiro, Brazil

Supervisors

Prof. M. Schmidt

Prof. S.S Valença

Assessment Committee

Prof. B.N. Melgert

Prof. H.I. Heijink

Prof. F.R. Cassee

Prof. C. F. Benjamim

Paranymphs:

Angélica Maria Sabogal Guáqueta

Contents

Chapter 1	General Introduction	9
Chapter 2	Function of cAMP scaffolds in obstructive lung disease: Focus on epithelial-to-mesenchymal transition and oxidative stress	27
Chapter 3	Phosphodiesterases as therapeutic targets for respiratory diseases	59
Chapter 4	Nanodomains in cardiopulmonary disorders and the impact of air pollution	115
Chapter 5	Acute Exposure to Diesel-Biodiesel Particulate Matter Promotes Murine Lung Oxidative Stress by Nrf2/HO-1 and Inflammation Through the NF- κ B/TNF- α Pathways	137
Chapter 6	Diesel exhaust particles alter cAMP producing capacity and mitochondrial bioenergetics in human bronchial epithelial cells	159
Chapter 7	Dimethyl Fumarate Attenuates Lung Inflammation and Oxidative Stress Induced by Chronic Exposure to Diesel Exhaust Particles in Mice	191
Chapter 8	General Discussion	213
Appendix	Summary	229
	Resumo	231
	Nederlandse Samenvatting	239
	Curriculum Vitae	247
	List of publications	249
	Acknowledgements	251
