Agreement Processing in Dutch Adults with Dyslexia

PhD thesis

to obtain the joint degree of PhD at the
University of Groningen, the University of Potsdam,
Macquarie University and Newcastle University

on the authority of the
Rector Magnificus of the University of Groningen, Prof. C. Wijmenga,
President of the University of Potsdam, Prof. O. Günther,
Deputy Vice Chancellor of Macquarie University, Prof. S. Bruce
Downton, and Vice Chancellor of Newcastle University, Prof. Ch. Day

and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Thursday 24 June 2021 at 9.00 hours

by

Aida Salčić

born on 21 April 1988
in Sarajevo, Bosnia and Herzegovina

Supervisors

Prof. Y. R. M. Baastiaanse

Prof. L. Nickels

Co-supervisor

Dr. S. Popov

Assessment committee

Prof. Barbara Höhle

Prof. B. A. M. Maassen

Prof. J. E. Rispen

Prof. F. N. K. Wijnen

In memory of

Senka Salčić, my beloved mother

For always believing in me

ACKNOWLEDGEMENTS

During my PhD, I have often thought (or dreamt) about writing the acknowledgements and what that would really mean. Not only the completion of my doctoral degree, but also a special moment to reflect and thank everyone who has helped during my PhD journey in one way or another. Although it still does not feel real that I am closing this chapter in my life, thanking a large group of people in this section will certainly make it more of a reality.

I would first like to thank my mother, Senka Salčić, whose medical research on stroke patients with aphasia fostered my interest in neurolinguistics and inspired me to pursue research myself. Neither me nor this thesis would have existed without her; I am because she was, in more ways than one. It is therefore that I dedicate this thesis to her.

The work presented in my thesis would not have been possible without my supervisors. First and foremost, I am very grateful to my promotor, Roelien Bastiaanse, who has supervised me since my master's thesis and from whom I have learned a lot. In particular, I would like to thank Roelien for her guidance, expertise, and for inspiring me to always be more critical in my thinking and more precise in my writing. I am also grateful to Lyndsey Nickels, who joined my supervisory team in the last year of my project, but whose thorough feedback has been invaluable in shaping this thesis. I would also like to thank Lyndsey for her kindness, for hosting me at Macquarie University and for making me feel very welcome at the Cognitive Science department. Finally, I am indebted to Srđan Popov, whom I worked with since my master's thesis. I would like to thank Srđan for generously sharing his knowledge, for teaching me about the ins and outs of working with ERPs, for his flexibility, advice, and for all our friendly talks.

Furthermore, I would like to extend my sincere gratitude to my assessment committee: Barbara Höhle, Ben Maassen, Judith Rispens, and Frank Wijnen. Thank you for taking the time to evaluate my work and for your valuable comments.

During my PhD, I had the privilege to be part of a unique PhD program, IDEALAB. I would therefore like to thank the current and former IDEALAB directors: David Howard, Barbara Höhle, Gabriele Miceli, as well as my two supervisors, Roelien and Lyndsey. Thank you for creating such an extraordinary program, for sharing your knowledge, giving helpful feedback at the Winter and Summer Schools, for organizing the IDEALAB training and for the stimulating discussions. I would also like to thank Alice, Anja and Lesley for helping me navigate all the administrative challenges across continents. My IDEALAB PhD cohort (Team Hornets) deserves a special mention for sharing this journey together. In addition to IDEALAB, I am also thankful to my first globe-trotting international family – my EMCL master's cohort – and all the wonderful people in it.

Working on my PhD in Groningen, I was fortunate to be part of the Research School on Behavioral and Cognitive Neuroscience (BCN). I am thankful for all the interesting trainings, courses and events I attended through BCN. In particular, I am grateful to have been able to attend the Neuroanatomy course, one of the most memorable courses in my life. Furthermore, I would like to express my gratitude to Marijke (GSH), Christina (CLCG) and Diana (BCN) for their quick replies, reassurance and help whenever needed.

My project basically consisted of asking a number of people to read or listen to sentences in a lab or online, accompanied by different (mostly reading-related) tasks. Therefore, I am truly grateful to those without whom my project simply would not have existed: my participants. Thank you all for taking the time and being so enthusiastic about participating, learning more about the project, and helping me out.

I have to thank my MA advisor, Nedžad Leko from the Faculty of Philosophy at the University of Sarajevo, for sparking my interest in linguistics. His course on Syntax during my bachelor studies in Sarajevo made me decide to pursue an MA in linguistics and changed the whole trajectory of my career. Had I not taken this course, I certainly wouldn't be where I am today. Thank you, professor, for teaching me so much, for your continued encouragement, for recommending me to apply to the EGG summer schools, and for your always friendly demeanor and interest in my research and experiences abroad.

In Groningen, I had the distinct pleasure to be part of great research community. Therefore, I am thankful to the current and former members of the Neurolinguistics group (not an exhaustive list): Adrià, Annie, Atilla, Ben, Camila, Dörte, Effy, Ellie, Frank, Irene, Jakolien, Jidde, Juliana, Kaimook, Liset, Miren, Nat, Nermina, Nienke, Pauline, Roel, Sana, Seçkin, Solveig, Suzan, Teja, Toivo, Vânia, Wim, Weng, and Yulia. Thank you for your continued feedback on my work, and for fostering such an enjoyable and stimulating work atmosphere. And thank you, Juliana, Annie, Assunta, Jidde, Toivo, Irene, Pauline, Camila, Teja, Mara, Yulia, for all the borrels, picnics, barbecues and impromptu coffee/tea breaks.

Several members of the Neurolinguistics group deserve a special mention for their help with my project. I am very happy to have had a PhD colleague who was also doing research on adults with dyslexia. Thank you, Liset, for all your help with recruiting participants, sharing participants/data, our discussions on dyslexia, for being my conference buddy, and most importantly, for your friendship. My sincere gratitude also goes to Seçkin. Although he was not officially a part of my supervisory team, Seçkin stepped in at a time when I had to pivot to self-paced reading when the pandemic suddenly hit. Thank you for teaching me how to set

up an SPR experiment, for your help with the data analysis, for always finding the time, as well as for your optimism. I am also grateful to Wim for helping me choose the behavioral tests used in this thesis and for our discussions about dyslexia and my project.

Sharing “the best office in town” was a breeze with some incredible officemates over the years. Thank you, Juliana, Jidde, Irene, Liset, Jakolien, Nermina, and Weng, for the vibrant atmosphere. Thank you, Jidde, Liset and Irene for always patiently proofreading my emails to participants in Dutch. And many thanks to Irene, Liset and Pauline for correcting my translation of the Dutch summary in the thesis. I am grateful to Liset, Suzan and Sjors for their help with participant recruitment, and to Juliana, Atilla, Irene, Marjolein, Almut, Ilse, Iris, Michelle, and Frank for their help with the EEG data collection.

I also had the pleasure of supervising three interns in the EEG lab: Ilse, Iris and Michelle. I have immensely enjoyed working with the three of you! Thank you for your interest in my project and for your help with creating the stimuli for the SPR study. Ilse and Iris, thank you for deciding to write your MA theses with me as your supervisor and for your help with testing participants and scoring behavioral data for some of the participants in the final experiment. I am also indebted to Claire for her help with scoring.

During my PhD, I spent 6 months at the Cognitive Science department at Macquarie University in Sydney. To all the CogSci members: thank you for creating such a friendly work environment. The transition from Groningen to Macquarie was so seamless, both professionally and personally, that it (almost) made me rethink the saying: “Er gaat niets boven Groningen”. I’ve truly enjoyed my time in Sydney and there are a number of lovely people who are responsible for that: Valentina, Leonie, Ana, Hannah, Andrea, Diane, Irene, Inga, and others. I can’t wait to be back, but in the meantime, thank you for all the lunches, coffee/tea breaks, ‘barbies’, hikes, dinners, as well as all the laughs and all the fun in between. And to my dear Vale, as amazing as my Australian adventure was, us meeting at Macquarie and becoming such close friends is one of the best parts of it! I am so grateful for your friendship, moral support and encouragement since then. I couldn’t have picked a better person to share all the ups and downs of finishing the PhD at the same exact time.

Doing a PhD is hard, so I am grateful to all the friends who have made this journey easier. I owe my gratitude to my PhD friends Juliana, Annie, and Assunta for their friendship, unwavering support, an unlimited number of puns, as well as always bringing their A-game. Ju, my *irmã*, thanks for so many things! Thanks for always being there, for sharing all the good and bad times, for the *pura vida*, and now for being my paranymp. Annie, I’m happy we met on the first day

of EMCL and became good friends quickly. Thanks for your support over the years, out shared sense of humor, all the pub quizzes, travels, for growing and laughing together. And Assunta, thanks for your thoughtfulness, encouragement, our Skype office hours, and the sweetest greeting cards that always cheer me up.

Living abroad does have its perks. One of them is having friends in all corners of the world: Jan, Jelena, Marco, Jasmin, Ena, Saša, Nermina, Bernat, Ina, Ana, Nenad, Maja, Marjolein, Flo, and others. Special thanks go to Jelena and Saša, as well as Marco and Jasmin for always being my home-away-from-home, whether in Groningen/Amsterdam or Rotterdam/Schiedam.

And a giant ‘thank you’ to the friends I’ve known the longest and who’ve always been in my corner – my friends from Sarajevo: Dženana, Niđara, Alma, Sanja Š., Jovan, Dženan, and Mirza. My dear Dženi, I am so honored to have you as my best friend and now as my paranymp! It’s crazy to think that we’ve grown together so much over the past 25 years and still remain inseparable. Our friendship means so much to me that a simple ‘thank you’ is really not enough, but still: hvala! Dear Niđara, thank you for always knowing what to say, for your wisdom, sharing the same sense of humor, for always taking good care of my heart and for healing me with food whenever I came to visit in Marseille/Lucca broken after conferences. Nura is so lucky to have you! My dear Alma, thank you for your support and kindness, for laughs and fun, for sharing all the highs and lows – all the way from our late-night studying sessions and phone calls to now both finishing our PhD’s! To Sanja Š. for all the adventures we’ve had; to Dženo for all the walks, visits, food and deep talks. To Jovan for all his help over the years, for our talks, sharing music, books and finally, guitars in Canada. I am also grateful to both you and Radenka for hosting me in Canada for the SSSR conference. And thank you, Mirza, for becoming such an integral part of my thesis by designing the thesis cover and for making my cover idea the most wonderful reality. It’s genuinely a piece of art.

I am also grateful to Shady, for too much to count, but I’ll still give it a shot: thank you for all your love, support, patience, care, for believing in me when I didn’t, and for some statistics magic when nothing worked. Since the last year of my PhD coincidentally took place during a global pandemic, Shady has been the best lockdown company and kept me sane during this time (though I’m not sure if he’d say the same about me during the writing stage!). Shady, you made this PhD journey much more enjoyable and I’m looking forward to all our new adventures!

And finally, a thank you to my loving family: my mother Senka and father Dragan, my sister Sanja, my grandparents Munirka and Mustafa, my uncles Ahmed and Sead, as well as Jasmina, Armin, Amna, and others. Sanjo, I am grateful to have you as my big sister, for always motivating me and being there

whatever happens. Hvala ti što si mi najbliža osoba na svijetu. Voli te puno tvoj Ico. To Amna, for always bringing a smile to my face. To my uncle Ahmed, who is like a second father to me and who has taught me so much in life. Hvala ti na svemu, Aki. Puno mi znači što si uvijek bio uz nas i što si nas uvijek volio kao svoju djecu. Mimo i Mujo, vaš trag je u svemu što sam do sada postigla. Ovaj uspjeh ne bi bio moguć bez vas i vaše podrške. And a special thank you to my grandma Mima, whom I always had a special bond with, who is one of the the most intensely curious and creative people I've met and is my role model in so many things.

And finally, to my parents: Dragan and Senka. I am grateful to you for more than can fit into this thesis. Thank you for your never-ending support, unconditional love, for always believing in me, and investing so much in our education. Volim vas puno! Mama, I'd wish nothing more than you being here and being able to hold this thesis in your hands. But I know how proud of me you were and I know you'd be very proud of me today. Nedostaješ neizmjereno.

CONTENTS

CHAPTER 1: General Introduction	21
1. Introduction	23
1.1 Definition(s) of Dyslexia	25
1.2 Etiology of Dyslexia	27
1.3 Adults with Dyslexia	28
1.4 Theories of Morphosyntactic Processing in Dyslexia	29
1.5 Event-Related Brain Potentials (ERPs) and Agreement Violation Processing	31
1.6 Event-Related Brain Potentials (ERPs) in Dyslexia	32
1.6.1 N400	33
1.6.1.1 N400 in Dyslexia Research	33
1.6.2 Left Anterior Negativity (LAN)	34
1.6.2.1 LAN in Dyslexia Research	35
1.6.3 P600	36
1.6.3.1 P600 in Dyslexia Research	37
1.6.4 Advantages and Limitations of Using ERPs	38
1.7 Advantages and Limitations of Using Self-Paced Reading	39
1.8 Reading as the Modality of Presentation in Online Studies on Dyslexia	40
1.9 Linguistic Background	42
1.9.1 Gender in Dutch	42
1.11 Outline	47
CHAPTER 2: Event-Related Potential (ERP) Responses to Gender and Number Disagreement in Adults with Dyslexia in Listening	49
2.1 Introduction	51
2.1.1 Linguistic Background	51
2.1.2 Gender and Number Disagreement Processing and ERPs	53
2.1.3 Morphosyntactic Processing in Dyslexia with ERPs	54
2.1.4 Current Study	56
2.1.4.1 Research Questions and Predictions	57
2.2 Method	57
2.2.1 Participants	57
2.2.2 Behavioral Measures	58
2.2.3 Materials	59
2.2.4 Procedure	61
2.2.5 EEG Recording and Data Processing	62
2.2.6 Data Analysis	63
2.3. Results	63
2.3.1 Grammaticality Accuracy Results	63
2.3.2 ERP Results	64
2.3.3 Group Comparison of ERP Results	65

2.4	Discussion	69
2.4.1	ERP Responses to Morphosyntactic Violations in Listening in Adults with and without Dyslexia	69
2.4.2	ERP Differences between Gender and Number Disagreement Processing in Adults with Dyslexia	73
2.5	Conclusion	73
CHAPTER 3: Processing Gender and Number (Dis)agreement in Adults with Dyslexia in Reading and Listening: An Event-Related Potential (ERP) study		77
3.1	Introduction	79
3.1.1	Reading vs. Listening in Language Studies in Dyslexia	80
3.1.2	The Role of Presentation Modality in ERP Research	81
3.1.3	Current Study	83
3.1.3.1	Research Questions and Predictions	84
3.2	Method	85
3.2.1	Participants	85
3.2.2	Behavioral Measures	86
3.2.3	Materials	87
3.2.4	Procedure	88
3.2.5	EEG Recording and Data Processing	89
3.2.6	Data Analysis	90
3.3	Results	91
3.3.1	Grammaticality Accuracy Results	91
3.3.2	ERP Results	91
3.3.3	Summary of ERP Results	92
3.3.4	Listening (Chapter 2) vs. Reading (Current Study)	96
3.4	Discussion	96
3.4.1	P600 Differences between Adults with and without Dyslexia	96
3.4.1.1	The Structural Repair Mechanism of the P600 in Adults with Dyslexia	98
3.4.2	ERP Responses to Agreement Violations in Reading and Listening in Adults with Dyslexia	99
3.5	Conclusion	101
CHAPTER 4: The Processing of Subject-Verb (Dis)agreement by Dutch Adults with and without Dyslexia: A Self-Paced Reading Study		105
4.1	Introduction	107
4.1.1	The Role of Memory in Sentence Processing in Dyslexia	107
4.1.2	The Influence of Linear Distance and Working Memory on Sentence Processing	108
4.1.3	Current Study	110
