FACILITATING THE IMPROVEMENT AND ENLARGEMENT OF THE DONOR POOL IN CARDIOTHORACIC TRANSPLANTATION

Vincent van Suylen

V. van Suylen

**Facilitating the improvement and enlargement of the donor pool in
cardiothoracic transplantation**

The research described in this thesis was financially supported by the University Medical Center Groningen, the University of Groningen, the Catholic University Leuven, the Tekke Huizinga fund, UMCG Research foundation and Foundation “De Drie Lichten”.

Financial support for the printing of this thesis by the following companies and institutes is kindly acknowledged:

- Nederlandse Transplantatie Vereniging
- ChipSoft
- XVIVO

Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged.

TABLE OF CONTENTS

Chapter 1	Introduction and outline of thesis	9
PART I - LUNG TRANSPLANTATION		
Chapter 2	A multicenter study on long-term outcomes after lung transplantation comparing donation after circulatory death and donation after brain death	37
Chapter 3	First experience with ex vivo lung perfusion for initially discarded donor lungs in the Netherlands: a single-center study	55
PART II - HEART TRANSPLANTATION		
Chapter 4	Waiting list mortality and the potential of donation after circulatory death heart transplantations in the Netherlands	75
Chapter 5	Role of temperature in ex situ heart perfusion: a review and suggestions for future research	91
Chapter 6	Oxygenated machine perfusion at room temperature as an alternative for static cold storage in porcine donor hearts	137
Chapter 7	A study protocol for subnormothermic machine perfusion preservation and ex situ evaluation of rejected human donor hearts	163
Chapter 8	Ex situ perfusion of heart donated after euthanasia: a promising contribution to heart transplantation	185
Chapter 9	General discussion	199
