**The role of ubiquitin carboxyl-terminal hydrolase
isozyme L1/UCHL1 in human lung diseases:**

environmental exposure, epigenetics and epigenetic editing

Dandan Wu

The research presented in this thesis were performed within the framework of the Department of Pathology and Medical Biology, University Medical Center Groningen, The Netherlands, and Department of Cell Biology, Shantou University Medical Center, China.

The research projects were financially supported by the Abel Tasman Talent Program (ATTP) of the Graduate School of Medical Sciences (GSMS), University of Groningen, a research grant from the Jan Kornelis de Cock Stichting, the Guangdong Natural Science Foundation of China (No. 2017A030313131) and the National Natural Science Foundation of China (Nos. 31771582 and 31170785).

Printing of this thesis was financially supported by the University of Groningen, Graduate School of Medical Sciences (GSMS).

environmental exposure, epigenetics and epigenetic editing

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 14 September 2021 at 11.00 hours

by

Dandan Wu

born on 9 September 1989
in Fujian, China

Table of contents

Chapter 1	General Introduction	9
	Scope of the thesis	18
Chapter 2	Epiproteome profiling of cadmium-transformed human bronchial epithelial cells by quantitative histone post-translational modification-enzyme-linked immunosorbent assay <i>Journal of Applied Toxicology: (2018) 38:888-895</i>	25
Chapter 3	Ubiquitin carboxyl-terminal hydrolase isozyme L1/UCHL1 suppresses epithelial–mesenchymal transition and is under-expressed in cadmium-transformed human bronchial epithelial cells <i>Cell Biology and Toxicology: (2021) 37:497–513</i>	43
Chapter 4	The potential for targeted rewriting of epigenetic marks in COPD as a new therapeutic approach <i>Pharmacology&Therapeutics: (2018) 182:1-14</i>	73
Chapter 5	Towards sustained silencing of the UCHL1 gene by recruiting both MSsI and SKD: improving CRISPR tools <i>“Submitted”</i>	113
Chapter 6	Targeted epigenetic silencing of cigarette smoke- induced UCHL1 expression suppresses collagen 1 and fibronectin production in human lung epithelial cells <i>“In prep”</i>	143
Chapter 7	Technical considerations regarding epigenetic editing	179
Chapter 8	Summary, general discussion and future perspectives	193
Appendices	Dutch summary Nederlandse samenvatting	214
	Acknowledgements Dankwoord	217
	Biography and list of publications	223
