Zernike Institute PhD thesis series 2021-22

ISSN: 1570-1530

The work described in this thesis was performed in the research group Nanostructures of Functional Oxides of the Zernike Institute for Advanced Materials at the University of Groningen, the Netherlands. This work was supported by China Scholarship Council (CSC, No. 201606450021) and the Ubbo Emmius Fund of the University of Groningen.

Understanding and control of the metallic state in epitaxial NdNiO_3

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans

This thesis will be defended in public on

Friday 24 September 2021 at 11.00 hours

by

Qikai Guo

born on 14 September 1990
in Shandong, China

Supervisors

Prof. B. Noheda

Prof. T. Banerjee

Assessment Committee

Prof. J. Ye

Prof. T.T.M. Palstra

Prof. J-M. Triscone

Contents

1	Introduction	1
1.1	Electrical conduction	1
1.2	Metals	4
1.2.1	Fermi liquids	6
1.2.2	Non-Fermi liquids	8
1.2.3	Superconductors	9
1.2.4	Bad metals, strange metals and Planckian metals	11
1.3	Conduction in non-metals	13
1.3.1	Nearest Neighbor Hopping	14
1.3.2	Variable Range Hopping	15
1.4	Metal-insulator transition	17
1.4.1	Mott-Hubbard insulators	17
1.4.2	Charge-transfer insulators	20
1.4.3	The phase transition	22
1.5	Rare-earth nickelates	23
1.5.1	Phase diagram	23
1.5.2	Electronic configuration	25
1.5.3	Effect of epitaxial strain	27
1.5.4	Structural defects	29
1.5.5	Scope of applications	32
1.6	Research motivation	35
	Bibliography	36
2	Experimental techniques	45
2.1	Pulsed laser deposition	45
2.1.1	Laser Fluence	46

2.1.2	Target	47
2.1.3	Substrate	48
2.1.4	Substrate temperature	56
2.1.5	Gas pressure	58
2.1.6	Results of growth optimization	59
2.2	Characterization methods	60
2.2.1	Reflection High Energy Electron Diffraction.	60
2.2.2	X-Ray Diffraction	61
2.2.3	Electrical properties characterization	66
	Bibliography	72
3	Modulation of the metal-insulator transition in epitaxial nickelates	77
3.1	Introduction	77
3.2	Experimental methods	78
3.3	Results and discussion	79
3.3.1	Effect of the radius of the rare-earth ion.	79
3.3.2	Effect of the substrate-induced strain.	82
3.3.3	Effect of the substrate orientation	85
3.3.4	Effect of the film thickness.	87
3.4	Conclusion	94
	Bibliography	95
4	Tunable resistivity exponents in the metallic phase of epitaxial nickelates	99
4.1	Introduction	99
4.2	Experimental methods	100
4.3	Results	102
4.3.1	Tuning the resistivity-temperature exponent.	102
4.3.2	Interplay between strain and defect formation.	109
4.4	Discussion	113
4.5	Conclusion	116
	Bibliography	117
5	From hidden metal-insulator transition to Planckian dissipation by tuning disorder	123
5.1	Introduction	123
5.2	Experimental methods	124
5.3	Results	125
5.3.1	Hidden metal-insulator transition.	125
5.3.2	Change of conduction mechanism by modulating disorder.	128
5.3.3	Direct observation of the conduction inhomogeneity	131

Contents

5.3.4	Disorder tuning in various systems.	132
5.4	Discussion	134
5.4.1	Double percolation model.	134
5.4.2	Underlying physics behind the strange linear- T resistivity. . . .	136
5.5	Conclusion	139
5.6	Supplementary figures	140
	Bibliography	144
6	The intermediate metallic character of epitaxial nickelates	151
6.1	Introduction	151
6.2	Methods	153
6.3	Results	153
6.3.1	Absence of structural anomalies at high temperatures	157
6.3.2	Saturation resistivity	158
6.4	Discussion	160
6.4.1	Good metal or bad metal	162
6.4.2	Intermediate strength of electron scattering	163
	Bibliography	166
	Summary	170
	Samenvatting	174
	Curriculum Vitae	179
	Publications	180
	Acknowledgements	182
