Quantifying Local to Regional Emissions of Methane Using UAV-based Atmospheric Concentration Measurements

Truls Andersen

PhD thesis, 2021,
University of Groningen,
the Netherlands.

ISBN: 978-94-6416-887-7

Printed by: Ridderprint BV, the Netherlands

Cover deigned by: Truls Andersen

The research described in this thesis was performed at the Center for Isotope Research (CIO), which is part of the Energy and Sustainability Research Institute Groningen (ES-RIG), University of Groningen, the Netherlands.

Quantifying Local to Regional Emissions of Methane Using UAV-based Atmospheric Concentration Measurements

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on
Monday 15 November 2021 at 12:45 hours

by

Truls Andersen

born on 12 October 1990
in Bergen, Norway

Supervisors

Prof. Huilin Chen

Prof. Wouter Peters

Assessment committee

Prof. Harro A. J. Meijer

Prof. Sander Houweling

Prof. Steven C. Wofsy

TABLE OF CONTENTS

Contents

1	Introduction	1
1.1	Climate	1
1.1.1	Modern climate change	2
1.2	The global methane cycle	3
1.2.1	Sources and sinks	4
1.2.2	Isotopic signature	5
1.3	The Upper Silesia Coal Basin	5
1.4	Understanding the methane budget	6
1.4.1	Global	6
1.4.2	Regional	7
1.4.3	Local	9
1.5	Unmanned aerial vehicle-based measurements	9
1.5.1	Active AirCore System	11
1.6	Dispersion of CH ₄ plumes	12
1.6.1	Plume rise	13
1.6.2	Vertical and horizontal dispersion parameters	14
1.6.3	Limitations	15
1.7	Objectives and thesis outlook	16
2	A UAV-based active AirCore system for measurements of greenhouse gases	17
2.1	Introduction	18
2.2	Method	20
2.2.1	Active AirCore	20
2.2.2	The trace gas analyzer	22
2.2.3	Laboratory tests	23
2.2.4	The UAV	24

2.2.5	The analysis box	24
2.2.6	Data processing	25
2.2.7	Atmospheric station	28
2.3	Results	29
2.3.1	Flight trajectories	29
2.3.2	Tower measurements	31
2.3.3	The vertical profiles of CO ₂ , CH ₄ , and CO	31
2.3.4	Verification of the active AirCore	35
2.3.5	Methane enhancement from wetlands	36
2.3.6	Spatial resolution	38
2.4	Conclusions	39
3	Quantifying methane emissions from coal mining ventilation shafts using an Unmanned Aerial Vehicle (UAV)-based active AirCore system	43
3.1	Introduction	44
3.2	Methodology	47
3.2.1	Atmospheric measurements	47
3.2.2	UAV flights	50
3.2.3	Emission rate quantification approaches	52
3.2.4	Simulated data experiment	55
3.3	Results and discussion	56
3.3.1	Fluxed derived from pseudo data	56
3.3.2	Emission rates derived from flight data	59
3.4	Conclusions	65
3.5	Supplement information	68
3.5.1	Simulated data flights	68
3.5.2	All flight profiles	68
4	Regional methane emissions from the Upper Silesia Coal Basin (USCB) quantified using UAV-based atmospheric measurements	77
4.1	Introduction	79
4.2	Methodology	80
4.2.1	UAV-based Active AirCore system	80
4.2.2	Meteorological data	81
4.2.3	Flight information	81
4.2.4	Emission determination	83
4.2.5	Inventories	84
4.2.6	Up-scaling	85
4.3	Results and discussion	85
4.3.1	Isotopic signature	85
4.3.2	CH ₄ emissions	86
4.3.3	Comparison with inventory	89
4.3.4	Carbon dioxide emissions	94
4.4	Up-scaling and regional comparison	97
4.5	Conclusions	99
4.6	Supplement information	102

4.6.1	Flight profiles	102
5	Discussion and outlook	107
5.1	The importance of methane source quantification	107
5.2	Atmospheric methane measurements	108
5.2.1	The active AirCore system	108
5.2.2	Available methane sensors	109
5.3	Coal mining	111
5.3.1	Methane emission quantification from a coal mine ventilation shaft . .	112
5.3.2	Estimate of regional methane emissions	115
5.3.3	The global demand of coal	116
5.4	Perspectives and recommendations	118
	Summary	121
	Samenvatting	127
	Bibliography	149
	Acknowledgements	151
	List of publications	155
