Toward Genetic Screening for Glaucoma

Using data-driven strategies to screen for and study ocular disorders in cohort settings

Anna Neustaeter

This project has received funding from the European Union's Horizon 2020 research and innovation programme under the Marie Skłodowska-Curie grant agreement No **661883** (EGRET) and from the Rotterdamse Stichting Blindenbelangen, grant number **B20150036**. I gratefully acknowledge Professor Mulder Stichting for generous financial support to the publication of this thesis, in addition to the University of Groningen, Graduate School of Science, and Research School Behavioral and Cognitive Neurosciences.

Towards Genetic Screening for Glaucoma

Using data-driven strategies to screen for and study ocular disorders in cohort settings

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on
Tuesday 23 November 2021 at 11.00 hours

by

Anna Neustaeter

born on 17 February 1987
in Colonia Álvaro Obregón, México

Supervisors

Prof. N. M. Jansonius

Prof. H. Snieder

Assessment Committee

Prof. T. de Bock

Prof. J. R. Vingerling

Prof. A. A. Bergen

Acknowledgements

First, I would like to thank my esteemed supervisors Prof. Nomdo Jansonius and Prof. Harold Snieder for not only this incredible research opportunity, but also their supervision, support, and tutelage during my PhD degree. Your guidance has led to incredible scholastic growth for me, I will value this gift for the rest of my life. I would like to express my heartfelt appreciation to Kim Westra for her ongoing technical support and friendship; we may live in different countries now, but we will always have Hotel Friesland. I want to thank Dr. Ilja Nolte for her analytical support and general computing wizardry; if I can attain even a fraction of your skillset, I will consider myself a genius. And a huge thanks goes to Corien for her continuing EyeLife data collection, words cannot express how much this truly means to me (and my future)! I would like to thank my thesis reading committee: Prof. Arthur Bergen, Prof. Truuske de Bock, and Prof. Hans Vingerling. I appreciate your time and effort in ensuring that my thesis is upheld to the standards required for this degree.

I also thank Chris, Eliza, and Peter for being the very best office mates and friends a Canadian could ask for, even though you got me hooked on pepernoten and that delicious Polish fruit pudding, they are impossible to find back home. I need to thank the friends and colleagues I made within EGRET: Giorgia, Valeria, Iris, Vincenzo, Catarina, Lorenzo, Tuomas (litu), Shereif, and Nigus. You made my time abroad feel like home and I cherish these memories. I met (other) Anna and Manal late in my time abroad, and I am so lucky and grateful to be your friend. Now I expect a visit from every one of you, and please keep your guest room ready for me!

My deepest appreciation goes out to my husband Jim for joining and supporting me on this wild ride. You not only inspired me personally and academically, but you also encouraged me to join the hockey team where I made new friends by colliding into them. From getting lost in the La Palma jungle to nerding out and watching lord of the rings, live in concert!, my PhD experience would have been nothing without you. It has been serendipitous, thank you. I also want to acknowledge and thank my Canadian friends and family, thanks for supporting me from a distance, and filling me with delicious foods when I visited, now you're all stuck with me forever. And finally I want to thank Bosanquet Central School, for having faith in a shy Mexican immigrant girl, you made me the curious person I am today.

“The most difficult thing is the decision to act. The rest is merely tenacity.”

– ***Amelia Earhart***
