Arm swing in healthy and Parkinsonian gait

Explorations on brain, muscle and movement level

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

woensdag 24 november 2021 om 12.45 uur

door

Joyce Berdien Weersink

geboren op 12 maart 1993
te Oldenzaal

Promotores

Dr. B.M. de Jong

Prof. dr. N.M. Maurits

Beoordelingscommissie

Prof. dr. H.P.H. Kremer

Prof. dr. C.J.C. Lamoth

Prof. dr. C.J. Stam

Table of Contents

Chapter 1	General introduction	9
------------------	----------------------	---

Part I: Arm swing in human gait

Chapter 2	EEG time-frequency analysis provides arguments for arm swing support in human gait control. <i>Gait & Posture 2019; 70: 71-78</i>	29
Chapter 3	Intermuscular coherence analysis in older adults reveals that gait related arm swing drives lower limb muscles via subcortical and cortical pathways. <i>Journal of Physiology 2021; 599: 2283-2298</i>	51
Chapter 4	Amble gait EEG points at complementary cortical networks underlying stereotypic multi-limb co-ordination. <i>Frontiers in Human Neuroscience 2021; 15: 69148</i>	79

Part II: Arm swing in Parkinsonian gait

Chapter 5	Impaired arm swing characteristics correlate with distinct gait parameters in Parkinson's disease.	105
Chapter 6	Enhanced arm swing improves Parkinsonian gait with EEG power modulations resembling healthy gait. <i>Parkinsonism & Related Disorders 2021; 91: 96-101</i>	111
Chapter 7	Neural coupling between upper and lower limb muscles remains present but is altered in Parkinsonian Gait. <i>Submitted</i>	129

Part III: Support of arm swing in Parkinsonian gait initiation

Chapter 8	Forward arm extension as a cue for gait initiation in Parkinson's patients. <i>Movement Disorders, 2018; 33: 1826-1827</i>	151
Chapter 9	Pre-movement cortico-muscular dynamics underlying improved Parkinson gait initiation after instructed arm swing. <i>Journal of Parkinson's Disease, 2020; 10: 1675-1693</i>	159
Chapter 10	Time-dependent directional intermuscular coherence analysis reveals that forward and backward arm swing equally drive the upper leg muscles during gait initiation. <i>Submitted</i>	199
Chapter 11	General discussion	213
