Stable Isotope Analysis of Water

Applications in water cycle, food authenticity and biological
energy expenditure research

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 1 November 2021 at 9.00 hours

by

Xing Wang

born on 4 October 1990
in Inner Mongolia, China

Supervisors

Prof. H.A.J. Meijer

Prof. G. van Dijk

Assessment Committee

Prof. H. Chen

Prof. J.R. Speakman

Prof. N. Ogrinc

Table of Contents

Chapter 1 : General Introduction	3
1.1 Isotopes	4
1.2 Notation and calibration materials.....	5
1.3 Fractionation.....	7
1.4 Relations between fractionation constants	9
1.5 Stable isotope analysis techniques.....	11
1.6 Application of stable isotope analysis of water in this thesis	12
1.6.1 Ice–liquid isotope fractionation factors for ^{18}O and ^2H	12
1.6.2 Application for wine authentication	12
1.6.3 The Doubly labelled water (DLW) method	13
Chapter 2: Analytical techniques for the determination of stable isotope ratios in water .19	
2.1 Isotope Ratio Mass Spectrometry	20
2.1.1 Preparation systems for the IRMS	21
2.1.2 IRMS systems used in this thesis.....	22
2.2 Laser spectrometry.....	25
2.2.1 Cavity Ring-down Spectroscopy	25
2.2.2 Off-Axis Integrated Cavity Output Spectroscopy	28
2.2.3 LGR liquid water isotope analyser	29
Chapter 3: Ice-liquid isotopic fractionation factors for ^{18}O and ^2H deduced from the isotopic correction constants for the triple point of water	40
3.1 Introduction	41
3.2 Calculation of the isotopic fractionation factors for ice vs liquid.....	43
3.2.1 The Van 't Hoff relation and isotopic fractionation.....	43
3.2.2 Isotope fractionation factor calculation based on Van 't Hoff relation.....	44
3.3 Discussion, conclusions and outlook	47
Chapter 4: Measurement of $\delta^{18}\text{O}$ and $\delta^2\text{H}$ of water and ethanol in wine by Off-Axis Integrated Cavity Output Spectroscopy and Isotope Ratio Mass Spectrometry	51
4.1 Introduction	52
4.2 Materials and methods.....	53
4.2.1 Wine sample collection and preparation	53
4.2.2 IRMS measurements method 1: Chromium reduction for $\delta^2\text{H}$ measurement (labelled in results as “PyrOH”).....	55
4.2.3 IRMS measurements method 2: High-temperature pyrolysis for $\delta^2\text{H}$ and $\delta^{18}\text{O}$ measurements (labelled in results as “TC/EA”)	56
4.2.4 ^2H -NMR measurements.....	56
4.2.5 Off-axis Integrated Cavity Output Spectroscopy measurement (labelled in results as “OA-ICOS”)	57
4.3 Results and discussion	58
4.3.1 Influences of ethanol, methanol and organics on the OA-ICOS wine measurements.....	58
4.3.2 OA-ICOS wine water measurement results	61
4.3.3 Influence of ethanol on the IRMS methods.....	62
4.3.4 Comparison of the $\delta^{18}\text{O}$ values measured by the OA-ICOS and IRMS.....	64

4.3.5 The $\delta^2\text{H}$ and $\delta^{18}\text{O}$ relation measured by the OA-ICOS and IRMS methods	66
4.3.6 Calculating $\delta^2\text{H}$ for ethanol by combining the IRMS and OA-ICOS methods.....	69
4.4 Conclusions	72
Chapter 5: Validity of Triply Labelled Water analysis for energy expenditure measurements in mice	77
5.1 Introduction	78
5.2 Material and methods	79
5.2.1 Animals and housing.....	79
5.2.2 Preparation of the Triply Labelled Water	80
5.2.3 Experimental design	81
5.2.4 Indirect calorimetry	82
5.2.5 Analysis method of the TLW samples.....	82
5.2.6 Calculations.....	84
5.3 Results	87
5.3.1 Body composition	87
5.3.2 Indirect calorimetry	89
5.3.3 Turnover rates k.....	90
5.3.4 Total body water (TBW) and dilution space	92
5.3.5 CO_2 production.....	94
5.4 Discussion	97
5.4.1 The Triply Labelled Water method	97
5.4.2 Calculation protocols	98
5.4.3 Influence of the nutritional conditions	99
Chapter 6: Discussion and outlook.....	105
Summary.....	109
Samenvatting.....	111
