Development of adenoviral vectors armed with TNF-re- lated therapeutic proteins for gene therapy

PhD thesis

The work described in this thesis was performed in the Department of Chemical and Pharmaceutical Biology at the University of Groningen.

The research was carried out according to the requirements of the Graduate School of Science, Faculty of Science and Engineering, University of Groningen, The Netherlands. It was financially supported by the Mexican National Council for Science and Technology (CONACyT).

Printing of this thesis was financially supported by the University Library and the Graduate School of Science, Faculty of Science and Engineering, University of Groningen, The Netherlands

Cover design: Williams S. Vázquez Ballinas

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 22 November 2021 at 16.15 hours

by

Olivia Adaly Diaz Arguello

born on 25 August 1988
in San Cristóbal de las Casas, Mexico

Supervisors

Prof. H.J. Haisma
Prof. F.J. Dekker

Assessment Committee

Prof. A. Salvati
Prof. E. Mastrobattista
Prof. E. Bremer

Table of content

Chapter 1	
Introduction and thesis scope	7
Chapter 2	
Apoptosis-Inducing TNF Superfamily Ligands for Cancer Therapy	17
Chapter 3	
Production and purification of adenoviral vectors for their use in gene therapy	51
Chapter 4	
CRISPR-mediated ablation of overexpressed EGFR in combination with sunitinib significantly suppresses renal cell carcinoma proliferation	67
Chapter 5	
Enhanced apoptosis in cancer cells by simultaneous targeting of Epidermal Growth Factor Receptor and TRAIL death receptors by adenoviral-expressed fusion proteins	87
Chapter 6	
Long-term secretion of adenovirally-expressed RANKL WT/ Q236D for treatment of fibrosis	107
Chapter 7	
Conclusions and future perspectives	127
Summary	135
Samenvatting	139
Appendix	145
