Quantification methods for brain imaging with novel and repurposed PET tracers

Nafiseh Ghazanfari

umcg

The research described in this dissertation was carried out at the Department of Nuclear Medicine and Molecular Imaging at the University Medical Center Groningen

The research reported in this dissertation was financially supported by the Graduate School of Medical Science and the Department of Nuclear Medicine.

The printing of this thesis was financially supported by the Medical Center Groningen and the Research School of Behavioral and Cognitive Neuroscience (BCN).

Thesis layout: Nafiseh Ghazanfari

Printed by: Ridderprint

ISBN: 978-94-6416-971-3

Cover design: Paul de Vreede

The cover is an abstract representation of the time-activity curve (TAC) of a radiotracer in the brain: the initial association phase from arterial blood (in red) to brain tissue and the subsequent dissociation phase from brain to venous blood (in purple) on the invitation.

Quantification methods for brain imaging with novel and repurposed PET tracers

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Thursday 23 December 2021 at 12:45 hours

by

Nafiseh Ghazanfari

Born in Tehran, Iran

Supervisor(s)

Table of Contents

Chapter 1

General introduction	11
Molecular imaging using positron emission tomography (PET)	13
The basic principles of PET	13
The PET tracer	14
PET data acquisition	15
PET data analysis	15
Semi-quantitative approach	15
Quantitative approach	17
Compartmental models	17
Graphical analysis models	21
Input functions without arterial blood sampling	23
Reference tissue models	23
The role of PET imaging in drug development	25
Thesis aim and outline	26
References	28

Chapter 2

Is Cyclooxygenase-1 involved in Neuroinflammation?	33
Introduction	35
Methods	38
Literature search	38
Results	39
In vitro studies	39
Animal studies	42
Post-mortem studies in humans	54
PET imaging of COX-1 expression	58
Summary of literature findings	64
Discussion	65
Conclusion	67
References	67

Chapter 3

Evaluation of [¹¹ C]SC-560 as a PET tracer for imaging of COX-1 expression in the inflamed rat brain	77
Introduction	79
Material and Methods	80
Radiolabelling	80
Animals	81
PET imaging and ex-vivo biodistribution	82
PET image reconstruction and analysis	83

Statistics	83
Results.....	83
Radiochemistry	83
PET imaging	83
Ex vivo biodistribution	86
Discussion	87
Conclusion	89
References	90

Chapter 4

Pharmacokinetic modeling of [¹¹ C]GSK-189254, a PET tracer targeting H ₃ receptors in rat brain	93
Introduction.....	95
Materials and Methods.....	96
Tracer synthesis	96
Animals	96
PET scan and blood data acquisition	97
Plasma parent fraction.....	98
PET image processing and data analysis	98
Pharmacokinetic modeling.....	99
Results	99
Tracer synthesis	99
Blood, plasma tracer kinetics and metabolism.....	100
Brain kinetics of [¹¹ C]GSK-189254.....	100
Pharmacokinetic modeling.....	101
Graphical analysis	106
Reference tissue models.....	106
Standardized uptake values	109
Discussion	110
Conclusion	112
References	113

Chapter 5

Binding of the Dual-Action Anti-Parkinsonian Drug AG-0029 to Dopamine D ₂ and Histamine H ₃ Receptors: a PET Study in Healthy Rats	117
Introduction.....	119
Materials and Methods.....	120
Tracer synthesis	120
Animals	121
PET imaging	121
Arterial blood sampling and metabolite analysis.....	122
Image processing and PET image analysis	123
Pharmacokinetic modeling.....	124
Receptor occupancy	124
Statistical analysis	125

Results	125
Tracer synthesis	125
[¹¹ C]Raclopride PET to assess D _{2/3} receptor occupancy	125
Kinetic modeling of [¹¹ C]GSK-189254, a tracer targeting H ₃ receptors	127
Discussion	132
Conclusion	134
References	134

Chapter 6

Pharmacokinetic Analysis of [¹⁸F]-FES to Assess Estrogen Receptor Availability in the Human Brain with PET

Introduction	141
Materials and Methods	142
Experimental design and study set-up	142
Tracer production	142
MRI acquisition	142
PET acquisition	142
Blood sampling and processing	143
Data analysis and image processing	144
Kinetic modeling	144
Target occupancy	145
Statistical analysis	145
Results	146
Tracer kinetics and metabolism	146
Compartmental models	147
Graphical analysis models	150
Standardized uptake value	151
Effect of the drug	152
Discussion	154
Conclusion	157
References	157

Chapter 7

Concluding remarks and future perspectives

Biomarkers of neuroinflammation, in particular TSPO and COX-1	162
Pharmakokinetic modeling and quantification model selection	164
Quantification of PET data in drug development applications	167
Future perspective to strengthen the potential of pharmacokinetic modeling	168
Concluding remarks	170
References:	171

Chapter 8

Summary in English

Chapter 9

Summary in Dutch (Nederlandse samenvatting)

Appendices	185
Supplementary	186
List of abbreviations	192
Acknowledgement	197
