**3D VIRTUAL SURGICAL PLANNING
AND PATIENT-SPECIFIC INSTRUMENTATION
IN SPINE SURGERY**

Peter A.J. Pijpker

Financial support for design and printing of this thesis was kindly provided by the University of Groningen (RUG), University Medical Center Groningen (UMCG), Graduate School of Medical Science (GSMS), Dutch Spine Society (DSS), Oceanz, InSpine, Materialise, and Formlabs.

TABLE OF CONTENTS

Chapter 1	General Introduction	7
PART I SPINAL DRILL GUIDES		
Chapter 2	Accuracy assessment of pedicle and lateral mass screw insertion assisted by customized 3D-printed drill guides: a human cadaver study	21
Chapter 3	Accuracy of patient-specific 3D-printed drill guides for pedicle and lateral mass screw insertion: an analysis of 76 cervical and thoracic screw trajectories	35
Chapter 4	A comparison of drill guiding and screw guiding 3D-printing techniques for intra- and extrapedicular screw insertion	53
Chapter 5	Accuracy of patient specific drill guides vs. computer navigation for pedicle and lateral mass screw insertion: a split-spine randomized controlled trial	69
PART II SPINAL DEFORMITIES		
Chapter 6	3D planning and use of individualized osteotomy-guiding templates for surgical correction of kyphoscoliosis: a technical case report	89
Chapter 7	3D-printing and virtual surgical planning assisted management of severe spinal deformities: an institutional experience of 10 cases	99
PART III THE CRANIOCERVICAL JUNCTION		
Chapter 8	3D printed polymethylmethacrylate casting molds for posterior fossa reconstruction in the surgical treatment of chiari I malformation: technical note and illustrative cases	127
Chapter 9	3D-printed drill guides for occipitothoracic fusion in a pediatric patient with occipitocervical instability	145
PART IV WORKFLOW OPTIMIZATION		
Chapter 10	A semi-automatic seed point based method for separation of individual vertebrae in 3D surface meshes: A proof of principle study	159
Chapter 11	General discussion	179
Appendices	Summary	192
	Nederlandse samenvatting	196
	Dankwoord	201
	About the author	205
