Animal personalities on the move

Aparajitha Ramesh

The research presented in this thesis was carried out at the Theoretical Research in Evolutionary Life Sciences (TRÊS), Conservation Ecology (ConsEco) and Evolutionary Genetics, Development & Behaviour (EGDB) departments at the Groningen Institute for Evolutionary Life Sciences (GELIFES) of the University of Groningen (The Netherlands).

Aparajitha Ramesh received a PhD scholarship grant from the 'Adaptive Life' scholarship program from the University of Groningen. Part of the work was also supported by funds from the European Research Council (ERC Advanced Grant No. 789240), the Netherlands Organization for Scientific Research (NWO-ALW; ALWOP.668), the Gratama Foundation to AR (2020GR040), the Dr. J.L. Dobberke Foundation (KNAW WF /3391 /1911), and the Waddenfonds (Ruim Baan voor Vissen 2). The printing of this thesis was funded by the University Library and the Graduate School of Science and Engineering of the University of Groningen.

Cover design: Cover art by Ben Kawam. Image adapted from Willamette River Historical Stream Channels, Oregon by Daniel E. Coe, courtesy of Oregon Department of Geology and Mineral Industries.

Printed on 100% recycled paper by Ipskamp Printing, Enschede.

Animal personalities on the move

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus Prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

dinsdag 30 Augustus 2022 om 11.00 uur

door

Aparajitha Ramesh

geboren op 25 Juli 1993
te Madras, Tamil Nadu, India

Promotores

Prof. dr. F.J. Weissing

Prof. dr. A.G.G Groothuis

Co-promotor

Dr. M. Nicolaus

Beoordelingscommissie

Prof. dr. A.M. Bell

Prof. dr. K. van Oers

Prof. dr. M.E. Maan

Contents

1 Introduction	1
Why study individual variation?	2
A brief history of animal personality	3
Implications of animal personality	4
An integrative approach to studying animal personality	5
Links between movement and personality	5
Implications of individual variation in movement tendencies	6
Outline of this thesis	7
Empirical study system	7
Field studies – migrant and resident sticklebacks	8
Lab studies – personality tests	10
Mesocosm studies – experiments under semi-natural conditions	11
Theoretical studies	12
Modelling the implications of variation in movement strategies	13
2 Habitat fragmentation induces rapid divergence of migratory and isolated sticklebacks	15
Introduction	16
Methods	20
Study populations and data collection	20
Behavioral assays	21
Statistical analyses	24
Results	25
Morphological differentiation	25
Behavioral differentiation	27
Behavioral syndromes	27
Discussion	27
Phenotypic divergence between derived residents and ancestral migrants	27
Rates of phenotypic change	32
Population differences in syndromes	32
Conclusions	33
Acknowledgements	33

3 Does genetic differentiation underlie behavioural divergence in response to migration barriers in sticklebacks? A common garden experiment	41
Introduction	42
Methods	44
Study populations	44
Lab-bred F1 juveniles	44
Individual identification	46
Large-scale movement tendencies in mesocosm (migratory tendencies)	46
Lab behaviour assays	47
Statistical analyses	50
Results	50
Discussion	51
Acknowledgements	55
4 Mesocosm experiments reveal the loss of migratory tendencies in a recently isolated population of three-spined sticklebacks	61
Introduction	62
Methods	64
Mesocosm system	64
Experiment 1	64
Experiment 2	64
Analyses	65
Results	65
Discussion	66
Acknowledgements	68
5 Individual personalities and not the social context predict movement tendencies in three-spined sticklebacks	73
Introduction	74
Methods	77
Study populations	77
Experimental groups	77
The mesocosm	77
Monitoring movements	78
Statistical analysis	78
Results	79
Pond crosses	79
Latency to exit the first pond	79
Discussion	79
Acknowledgements	82
Intermezzo: Details matter when modelling the effects of animal personality on the spatial distribution of foragers	87
Personality variation and the IFD	88
Problems with the technical implementation of the model	88

Effects of population size	90
Quantifying the approach to the IFD	92
Analysis of the mud crab system	92
Outlook	93
Acknowledgements	94
6 Ideal free distribution of unequal competitors: spatial assortment and evolutionary diversification of competitive ability	95
Introduction	96
Models and Results	98
Spatial assortment: good competitors prefer resource-rich patches	99
Evolution of competitive ability	100
Changing environments: evolution of competitive diversity	102
Discussion	104
Acknowledgements	107
7 General discussion	115
What we started out to do	116
Partial migration in sticklebacks	116
A compromise: migrant – resident system	117
What can we learn from the sticklebacks?	118
Migrants and residents: in a nutshell	118
Is there a migration syndrome in sticklebacks?	118
What happens when populations are reconnected?	121
Perspectives on theoretical modeling	122
Conceptual models	123
Models tailored to empirical systems	124
Modeling moving forward	125
Closing remarks	126
Summary	129
Nederlandse samenvatting	133
Bibliography	137
Acknowledgments	153
About the author	159
Author affiliations	161
