Spectral and timing properties of neutron-star low-mass X-ray binaries

PhD thesis

to obtain the degree of PhD at the University of Groningen on the authority of the Rector Magnificus Prof. E. Sterken and in accordance with the decision by the College of Deans.

This thesis will be defended in public on

Monday 27 June 2016 at 11.00 hours

by

Ming Lyu

born on 20 March 1987 in Hunan, China
Supervisor
Prof. R. M. Méndez

Assessment Committee
Prof. P. D. Barthel
Prof. M. B. M. van der Klis
Prof. A. Heger
## Contents

1 Thesis Introduction .................................................. 1
   1.1 General scenario ................................................. 1
      1.1.1 Nuclear burning on the neutron-star surface ............ 3
      1.1.2 Spectral and timing techniques used to study the properties of LMXBs  .................................................................. 4
      1.1.3 Telescopes ....................................................... 5
   1.2 Outline of this thesis ............................................... 9

2 Spectral analysis of 4U 1636−53 ...................................... 13
   2.1 Introduction ......................................................... 14
   2.2 Observations and data reduction .................................. 16
      2.2.1 Suzaku data reduction ........................................ 16
      2.2.2 XMM-Newton and RXTE data reduction ................... 18
   2.3 Spectral Analysis .................................................... 18
      2.3.1 Spectral model ................................................... 20
   2.4 Results ............................................................... 21
      2.4.1 Fitting results ................................................... 21
      2.4.2 Flux evolution ................................................... 25
   2.5 Discussion .......................................................... 26

3 Spectral analysis of 4U 1728−34 ..................................... 41
   3.1 Abstract ............................................................ 42
   3.2 Introduction ......................................................... 42
   3.3 Observations and data reduction .................................. 43
   3.4 Spectral Analysis .................................................... 44
      3.4.1 Direct emission ................................................... 44
      3.4.2 Reflection emission ............................................. 45
   3.5 Results ............................................................... 46
   3.6 Discussion .......................................................... 49
## CONTENTS

### 4 MHz QPOs in 4U 1636–53

4.1 Abstract ........................................ 56
4.2 Introduction .................................... 56
4.3 Observation and data reduction
   4.3.1 Spectral data .............................. 58
   4.3.2 Timing data ............................... 59
4.4 Results ......................................... 61
   4.4.1 Timing results ............................. 61
   4.4.2 Spectral results ......................... 62
4.5 Discussion .................................... 67
4.6 Appendix A: Other fitting results with a blackbody component ............ 70
4.7 Appendix B: Other fitting results with a disc component .................. 70

### Analysis of the mHz QPOs in 4U 1636–53

5.1 Abstract ........................................ 82
5.2 Introduction .................................... 82
5.3 Observations and data reduction
   5.3.1 Timing data .............................. 84
   5.3.2 Spectral data ............................. 85
5.4 Results ......................................... 91
   5.4.1 Timing results ............................. 91
   5.4.2 Spectral results ......................... 91
5.5 Discussion .................................... 94

### 6 MHz QPOs and burst convexity in 4U 1636–53

6.1 Abstract ........................................ 102
6.2 Introduction .................................... 102
6.3 Observations and data reduction ........................................ 103
6.4 Results ......................................... 104
6.5 Discussion .................................... 105

### English Summary

113

### Nederlandse Samenvatting

119
