Erratum

Erratum: Mechanism of the heavy-ion charge-exchange reaction $^{12}\text{C}(^{12}\text{C}, ^{12}\text{N})^{12}\text{B}$ at 35 MeV/nucleon [Phys. Rev. C **33**, 1333 (1986)]

J. S. Winfield, N. Anantaraman, Sam M. Austin, L. H. Harwood, J. van der Plicht, H.-L. Wu, and A. F. Zeller

An error has been found in the charge-exchange form factor code [A. Etchegoyen *et al.*, Nucl. Phys. **A397**, 343 (1983)] we used to calculate the one-step distorted-wave Born approximation predictions for the $^{12}\text{C}(^{12}\text{C}, ^{12}\text{N})^{12}\text{B}$ reaction. Revised values for $V_{\sigma\tau}$ in Table III of the paper are presented as follows for each ^{12}B state (indicated by spin and parity):

J_f	1^+	2^+	2^-	4^- (2^-)
$V_{\sigma\tau}$ (MeV)	32	25	62	24

Only the cross section for the ^{12}B 2^+ (0.95 MeV) state is greatly affected; compared to the paper, the revised value is more consistent with the values deduced from the other states. Our main conclusions are unaffected since they were based on the ^{12}B 1^+ ground state, which shows only a relatively small change (10% in $V_{\sigma\tau}$).

We thank A. Etchegoyen for informing us of the error.
