Characterization and Source Apportionment of Carbonaceous Aerosols in China

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 15 April 2019 at 12.45 hours

by

Haiyan Ni

born on 30 June 1988
in Tianjin, China

Supervisor

Prof. H.A.J. Meijer

Co-supervisor

Dr. U. Dusek

Assessment Committee

Prof. W. Peters

Prof. M. Glasius

Prof. S. Szidat

Contents

1 Introduction	9
1.1 Aerosol	10
1.2 Carbonaceous aerosols	12
1.3 Light absorption of brown carbon	14
1.4 Volatility and aging of organic aerosols (OA)	17
1.5 Source apportionment of carbonaceous aerosols	19
1.6 Ambient PM _{2.5} pollution in China	26
1.7 Motivation and thesis outline	29
References	31
2 Source apportionment of carbonaceous aerosols in Xi'an, China: insights from a full year of measurements of radiocarbon and the stable isotope ¹³C	37
2.1. Introduction	38
2.2 Methods	43
2.2.1 Sampling	43
2.2.2 Organic carbon (OC), elemental carbon (EC), and source markers' measurement	44
2.2.3 Stable carbon isotopic composition of OC and EC	44
2.2.4 Radiocarbon (¹⁴ C) measurement of OC and EC	45
2.2.5 Source apportionment methodology using ¹⁴ C	46
2.2.6 Source apportionment of EC using Bayesian statistics	47
2.3. Results	48
2.3.1 Temporal variation of OC and EC mass concentrations	48
2.3.2 Temporal variation of fossil and non-fossil fractions of OC and EC	49
2.3.3 ¹³ C signature of OC and EC	51
2.4 Discussion	53
2.4.1 Aerosol characteristics in Xi'an compared to other Chinese cities..	53

2.4.2 Correlations between $F^{14}C_{(EC)}$ and biomass burning markers	54
2.4.3 $\delta^{13}C/F^{14}C$ -based statistical source apportionment of EC.....	55
2.4.4 Estimating mass concentrations and sources of primary OC	60
2.4.5 Differences between observed and estimated primary OC concentrations and sources.....	63
2.4.6 Changes in emission sources in Xi'an, China (2008/2009 vs. 2012/2013)	65
2.5 Conclusions	67
Acknowledgments	69
References	70
S2. Supplement.....	78
3 High contributions of fossil sources to more volatile organic carbon...	103
3.1 Introduction	104
3.2 Methods	107
3.2.1 Sampling	107
3.2.2 Determination of carbon fractions by thermal-optical analysis	108
3.2.3 Radiocarbon (^{14}C) measurements of mvOC, OC and EC	108
3.2.4 Estimation of source contributions to different carbon fractions ...	111
3.3 Results	113
3.3.1 Method evaluation and quality control for mvOC extraction	113
3.3.2 mvOC, OC and EC concentrations	116
3.3.3 Non-fossil and fossil fractions of different carbon fractions.....	118
3.4 Discussion	125
3.5 Conclusions	128
Acknowledgments	130
Reference.....	131
S3. Supplement.....	138
4 Light-absorbing organic carbon in aerosol extracts from primary and aged coal combustion emissions	155
4.1 Introduction	156

4.2 Methods.....	158
4.2.1 Experimental setup.....	158
4.2.2 Off-line UV-Vis measurements and light absorption calculation ..	159
4.3 Results and discussion.....	161
4.3.1 Light absorption spectra.....	161
4.3.2 Bulk mass absorption coefficient (bulk MAC) of the methanol extracts	163
4.3.3 Methanol-extracted bulk MAC _{365nm}	164
4.4 Comparison with previous studies	170
4.5 Conclusion.....	172
Acknowledgment	173
Reference.....	174
S4. Supplement.....	182
5 Conclusion and Outlook	191
5.1 Sources of different carbon fractions of carbonaceous aerosols	192
5.2 Light absorption of primary and aged coal combustion emissions	202
References	204
Summary	207
Samenvatting	211
Acknowledgements	215
Curriculum vitae	217
