*To Bahju and Achoos for being mine and for keeping my spirits up*

## ACKNOWLEDGEMENTS

Seeing the fruits of your labour is always exciting. This book is a product of almost five years of research in the department of Economics and Business at the University of Groningen. Obviously, I am excited. Many people have discussed, and are still discussing issues of capital, productivity and economic growth which are echoed in this book. They have influenced my research directly and indirectly. Looking back at my journey to complete this book, I was not alone; many people have supported me both academically and morally. I am indebted to them all. Nevertheless, some names need to be mentioned, though others are no less important.

I thank my supervisors Bart van Ark and Marcel Timmer for all their help and support in the process of completing this thesis. Marcel has been a friend and a mentor. He was always there to listen and to give advice. *Why? How? So what? Then?...* were some of his favourite questions on each and every argument, which helped me express my ideas more clearly. Bart was an enduring source of inspiration. Though it was hard to contact him, especially during the last few months, he always made a point in reading through my thesis and to make his comments. Apart from the academic help they extended to me, both Bart and Marcel were great support for me in my 'new life' in Groningen. I had hard times immediately after my arrival in Groningen bringing me close to consider quitting the project; I was too depressed with Dutch visa regulations! It was their supportive attitude along with appreciable help from the P&O staffs, in particular by Lony Emmen that made me stay. In the initial phase I got immense help from Bart in getting myself settled in Groningen — something a PhD. student in India can never expect from her supervisor. I will definitely try to follow that path. Bart and Marcel were also responsible for involving me in the OECD India Survey project, which also later brought me to a deeper India-China comparison with Bart and other colleagues at the Conference Board. I also cherish all the nice moments my family and I had with their families.

I would like to thank the thesis reading committee, Alan Heston, Bert Balk and Neils Hermes, for reading my manuscript. Alan in particular deserves a special mentioning for giving me suggestions on various nuances of the Penn World Tables (PWT) data and for providing me with the investment data underlying the PWT, together with Ye Wang.

Many of my Chapters have been presented in various international conferences from where I received many useful comments. Also, I had opportunity to discuss with many people whose work on capital and productivity measurement has influenced me. In particular, I would like to thank Angus Maddison, Barbara Fraumeni, Dale Jorgenson, Georg Licht, Keld Laursen, Niels Bosma and Theo Eicher for their comments. Also some of my Chapters are published in journals, the Review of Income and Wealth, the Journal of World Business and the Cesifo Economics Studies; I thank the editors of these journals.

My experience working with the Dutch firm level data was somewhat like 'taking the road less traveled', especially for foreigners. For the research in Chapters 4 and 5, I had to link five different databases, which were all documented in Dutch – a language I am only slowly mastering. I am thankful to the Statistics Netherlands (CBS) for allowing me to work with the micro data. In particular, I thank Dirk van den Bergen, Erik Veldhuizen, George van Leeuwen, Gerard Meinen, Mark de Haan and Myriam Horsten for all the useful discussions on different aspects of the data and their helpful comments. The excellent help and support by the CBS Microlab staff, in particular Arie Swart, Ineke Bottelberghs, Jan Mol, Joke Booij, Linda Muller-Geuzinge, René van der Poel and Rik Hoefkens is also warmly acknowledged.

Seldom have there been moments during my PhD days in Groningen that I did not enjoy. I am thankful to many friends and colleagues at the faculty of Economics and Business, and in particular at the Groningen Growth and Development Centre, for being compassionate during my

stay in Groningen, both at the academic and non-academic level. I mention only a few of them here formally by name. Robert Inklaar was one of the first whom I met at the faculty. I thank him for being very helpful in getting things to work initially, in dealing with matlab, and also for his comments on some of my works. Ward Romp and Mark Eldering were my first office mates and a guarantee for days of fun. Ward deserves a special mention for helping me in getting rid of some of the most menial tasks that often took just way longer than anticipated because I had no idea how things worked in this 'new place'. I thank him for reading all the official letters in Dutch, and making long phone calls to IND, thus making my life easier. Later I shared office with Jutta Bolt and Gaaitzen de Vries. They deserve a special mention for being brilliant friends, colleagues and officemates, and in particular Gaaitzen for being my paranymph. During the last days of my PhD, I also shared office with Chaohong, Robert and Adissu. I thank them too for being good officemates. Ewout Frankema was a good friend and in particular I should thank him for extending timely help at various occasions; he proved that a friend in need is a friend indeed. Apart from being good friends, Gerard Ypma and Edwin Stuivenwold were very helpful in helping me deal with data. I also enjoyed my teaching modules with Ger Lanjauw and my language courses with James and Bettina. Thanks to Lourens Broersma for help in starting up my venture to understand the Dutch micro data; Ana, Carolina, Cesar, Erica, Gjal, Harald, Herma, Herman, Janneke, Jop, Katrin, Padma, Reitze and Richard for providing a friendly work environment; Mizbah, Tanveer and Faheem for being good family friends; and Dirk Peiter, Martin Land and SOM office, particularly Ellen and Rina, for making life as a Groningen PhD student easy. Financial assistance by EU-KLEMS and the Conference Board (TCB) for the timely extension of my contract with the University is gratefully acknowledged. Also I thank my TCB colleagues, in particular Vlad and Utsav, for their rewarding research cooperation.

Bart Los read and commented on different chapters of my thesis at various stages. I thank him for all his constructive comments and for being a wonderful colleague. For comments and suggestions on different parts of my research I am also indebted to Erik Dietzenbacher, Dirk Bezemer, Michal Kötter and Gerard Kuper. The comments and suggestions by Jakob de Haan on my last Chapter are acknowledged. Special thanks to Jojo Jacob for his comments on many of my writings and for being a brilliant friend. I am indebted to Simon de Jong for being a wonderful co-author and for allowing me to include our paper on ICT adoption and culture in my thesis. My special thanks to Maaike Boumeester for gathering investment data from various UN publications and national statistical agencies.

Social life in Holland was made more enjoyable through the company of my friends outside the faculty. My initial days in Groningen were quite boring as I hardly knew anybody here. Those days were made beautiful with my frequent weekend visits to my Eindhoven friends, Jojo, Prashant, Soney, Dilna and Merina. They, along with my other Malayalee friends Rajesh, Denny and Jinesh facilitated often in the making of a 'kochu Keralam'. I thank Rajeev, Meik, Naomi & Mini, Suta and Sreeja for the nice times we have had, and in particular Rajeev for giving a 'non-economist's' view on my thesis summary. Thanks to all my Indian friends in Groningen, be part of the formal association or not, among which I may mention a few. Ajay and Ramesh for being unique and charming friends, Prasant, Aradhana & Keya, Saravanan, Devi & Nithil, Erusha & Bargav, Rajat, Ganesh and Kumar for gifting many nice Indian moments. I also thank my neighbour Mirjam for being a helpful friend.

Though we might meet people by chance, our friends are always by choice; Sivaji was a good friend with whom I could always strike a fruitful conversation. I thank Sivaji, Jojo, Prasanth, Rajesh, and Rajeev for all those mind-storming discussions with occasional spars and disagreements. A special thanks to Siva & Maryam, Nibu, Sherin & Kichu, and Sreeji, Divya & Achu for all the lively moments we have had. Thanks to Reshmi for being a good friend and my paranymph, to Shamz for all the fun that he brings with his unusual nicknames that often stay a

source of merriment among us for long and to Balu, Aneesh, Uma, Kiran, Jisha and Abhilash for making many typical Kerala feasts livelier. Thanks are also due to Noby & Neethu for making our parties more 'sparkling' and to Zubair & family and Hari for being helpful friends. For all the surprise parties and also for hosting us in Amsterdam during our airport breaks I thank Noby & Neethu, Pradeep & Jeena and Shibu & Vava. The onset of 'Nanma' made the life in Holland more like 'home away home'; thanks to all the Nanma members.

My interest in capital and productivity was nurtured during my days at the Centre for Development Studies, Trivandrum, Kerala. I thank all those who helped me shape my thinking, among which K.K. Subrahmanian (KKS), Pushpangadan, Achin Chakraborty and Suresh Babu deserve a special mention. KKS was a great source of inspiration; we never had a generation gap in communication. Also I acknowledge many conversations with Pulapre Balakrishnan that helped me mould my ideas. I cherish all the nice times discussing academics and non-academics with Veeraputhran, Prasad, Emmanuel, Sunny, Veeramani, Parameswaran, Hari, Baskar, Dennis, Harikurup, Sanjith, K.N Harilal, Babu-Neetha, Pinaki-Lekha, Deepa, Meena, Uma, Poornima, Francis and Zakaria and many help extended by Syam and Ratikant. The help and support by Anil Kumar and Philroy are highly acknowledged. There are a lot more in CDS; pardon me for not attempting to list your names, due to the fear of dropping many. I am also greatly indebted to many teachers in the past. Safiya Rasheed, P.P.Pillai, and Karim are some of the names to mention who played important role in my academic journey. Thanks to my friends Bindu, Rajesh, Babu and Nasar. I also remember the efforts that were taken by many of my friends and relatives, in the course of me reaching here in Groningen, which includes my uncle, Bavaelappa, Murugannan, Nalini Netto and Ramesh, who all helped reducing the bureaucratic slowness in getting things done.

This 'dankwoord' would not be complete without mentioning my family for their support throughout my seemingly endless years in academic institutions. On a very personal note, I appreciate my parents for their unconditional support and encouragement to pursue my interests, even when the interests went beyond the boundaries of language, field and geography, my uncle for being a support for my many 'non-traditional' ways and my grandma for being so loving and benevolent. Thanks to my brothers Gafoor, Anwar and Wahid; my in-laws Vappichi, Ummachi, Subi, Habi, Alif-Hanna & Fizza; my cousins, Mumthaz, Shanu, Shaniba, Afi, Irshad; and Aama and Chemmiaunti for making my occasional home visits lively. And to Thamji for being my little 'aliyan'.

Finally, but immensely, I appreciate my wife Bahju and my son Adish (Achoos) for the loving environment at home they have created. They are my real source of enthusiasm, and it was their patience, support, encouragement, understanding and love that helped me bring this work to fruition.

Abdul

<b>Contents</b>	v
<b>List of Tables</b>	vii
<b>List of Figures</b>	ix
<b>Chapter 1 Introduction</b>	1
1.1 The Measurement of Economic Growth	2
1.2 Aim and Outline of the Thesis	10
<b>Chapter 2 The Role of Capital in World Economic Growth: Accumulation versus Assimilation</b>	15
2.1 Introduction	15
2.2 Measurement of Aggregate Capital Input	18
2.3 Improved Measures of Capital Input	23
2.4 Accounting for World Economic Growth: The Methodology	26
2.5 Data and Variables	28
2.6 Capital Stock vs. Capital Services: The Effect of Capital Composition	32
2.7 Sources of World Economic Growth and Divergence: Capital accumulation or MFPG?	35
2.8 Capital Accumulation and MFPG: Accounting for Growth Episodes in Countries	40
2.9 Concluding Remarks	45
<b>Chapter 3 Rental Prices, Rates of Return, Capital Aggregation and Productivity: A Sensitivity Analysis</b>	49
3.1 Introduction	49
3.2 Rental Prices: Concept and Measurement	50
3.3 Data and Variables	60
3.4 Empirical Results	64
3.5 Concluding Remarks	76

<b>Chapter 4</b>	<b>Lifetimes of Machinery and Equipment: Evidence from Dutch Manufacturing</b>	81
4.1	Introduction	81
4.2	Estimating Survival Functions and Asset Lifetimes: The Methodology	83
4.3	Data and Variables	86
4.4	Empirical Results	95
4.5	Concluding Remarks	110
<b>Chapter 5</b>	<b>Innovation, Obsolescence and Retirement: An Exploration Using Data for Dutch Manufacturing Firms</b>	113
5.1	Introduction	113
5.2	Modelling the Scrapping Decision: An Overview	116
5.3	Methodology	123
5.4	Data and Variables	127
5.5	Empirical Results	135
5.6	Concluding Remarks	147
<b>Chapter 6</b>	<b>Ultimate Sources of Growth: The Role of Culture in ICT Adoption</b>	151
6.1	Introduction	151
6.2	ICT Adoption across Countries	153
6.3	Culture and ICT Adoption: Toward an Analytical Framework	156
6.4	The Data and Methodology	160
6.5	Empirical Results	163
6.6	Concluding Remarks	168
<b>Chapter 7</b>	<b>Summary and Conclusions</b>	171

# List of Tables

2.1 Capital Composition Effect by Countries and Regions	34
2.2 Variance Decomposition: Labour Productivity growth	39
2.3 Contribution of Capital deepening and MFPG to per capita output growth rate under growth regimes: Selected countries	42
2.4 T-test results: Before Break vs. After Break	44
2.5 The Effect of Capital composition under various growth episodes	45
3.1 Alternative Rental Price Models	60
3.2 Industries and ISIC Codes	61
3.3 Percentage of Negative Values in Rental Prices	64
3.4 Average Capital Composition Effect on MFPG, 1979-2003, Industry wise	69
3.5 Tax Effect on MFPG: Pre Tax vs. Post Tax Rates of Return, Industry wise, 1979-2003	70
3.6 Capital Gain Effect on MFPG: Internal Nominal vs. Internal Own Rates of Return, industry wise, 1979-03	72
3.7 Rates of Return Effect on MFPG: Internal vs. External Rates of Return, industry wise, 1979-2003	73
3.8 Regression- Capital Composition Effect on MFPG on Alternative Rental Price Models	75
4.1 Industries considered in the study	87
4.2 Estimated Regression Coefficients-Transport Equipment	97
4.3 Estimated Regression Coefficients-Computers	98
4.4 Estimated Regression Coefficients-Machinery	99
4.5 Estimates of Expected Average Service Lifetimes, Transport Equipment	101
4.6 Estimates of Expected average lifetimes, Computers	103
4.7 Estimates of Expected average lifetimes, Machinery	104
4.8 Comparison of asset lifetime estimates with earlier studies for the Netherlands (industry wise)	105
4.9 Comparison of asset lifetime estimates with earlier studies (Total manufacturing)	108
4.10 Comparison of machinery lifetime estimates with earlier studies (industry wise)	109
5.1 Alternative scrapping models and the impact of variables on discards	117
5.2 Determinants of scrapping decisions: A summary of selected studies	122

5.3	Alternative Innovation indicators used in the regression analysis	132
5.4	Descriptive Statistics	133
5.5	Number of innovative and non-innovative firms in the sample (by asset)	135
5.6	Marginal Coefficients: Probit Regression for Machinery discards	137
5.7	Marginal Coefficients: Probit Regression for Computers discards	139
5.8	Marginal Coefficients: Probit Regression for Transport discards	140
5.9	OLS estimates for Machinery discard	145
5.10	OLS estimates for Computer discard	146
5.11	OLS estimates for Transport Equipment discard	147
6.1	Correlations between Hofstede dimensions and control variables	161
6.2	Differences in ICT adoption: t-statistics	163
6.3	Regression Results for per capita ICT spending	166
6.4	Regression Results for per capita computer	167

# List of Figures

2.1	Equipment Share in Total Capital Stock, Various Income Groups	22
2.2	Capital Services vs. Capital Stocks-The Composition Effect	33
2.3	Growth Accounting: Growth rates of labour productivity	36
3.1	The Effect of Alternative Capital Aggregation on MFPG (in %)	67
4.1	Benchmark capital stock ( $K$ ) & annual discard series ( $D$ ) of vintage $j$ in year $t$	92
4.2	Actual vs. estimated survival function, food, beverages & tobacco industries	96
5.1	Frequency Distribution of Firm level Discard Rates, Netherlands	115
5.2	Frequency distribution of Firm level Discard rates	134
5.3	Effect of Innovation on predicted discard Probabilities	142
6.1	Share of ICT investment, 2000	154
6.2	ICT adoption and Hofstede Dimensions	164
