# Optical preparation and detection of spin coherence in molecules and crystal defects

PhD thesis

to obtain the degree of PhD at the  
 University of Groningen  
 on the authority of the  
 Rector Magnificus Prof. C. Wijmenga  
 and in accordance with  
 the decision by the College of Deans.

This thesis will be defended in public on

Friday 10 January 2020 at 14.30 hours

by

**Gerrit Jan Jacob Lof**

born on 30 March 1988  
 in Capelle aan den IJssel, the Netherlands

**Supervisors**

Prof. C. H. van der Wal

Prof. M. A. Loi

**Co-supervisor**

Dr. R. W. A. Havenith

**Assessment committee**

Prof. H. B. Braam

Prof. M. Orrit

Prof. J. Koehler

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Coherence and polarization of electron spins and photons . . . . .	1
1.2	Optical orientation . . . . .	2
1.3	Spin precession . . . . .	3
1.4	Coherent population trapping . . . . .	5
1.5	Jones calculus . . . . .	5
1.6	Theoretical chemistry methods . . . . .	7
1.7	Scope of this research and thesis outline . . . . .	8
1.8	SI: Change of basis . . . . .	11
1.9	SI: Jones calculus applied to a waveplate . . . . .	13
<b>2</b>	<b>Evolution of atomic optical selection rules upon gradual symmetry lowering</b>	<b>15</b>
2.1	Introduction . . . . .	16
2.2	The resonance lines of the hydrogen atom without spin . . . . .	17
2.2.1	The hydrogen atom in the absence of a magnetic field . . . . .	17
2.2.2	The hydrogen atom in the presence of a magnetic field . . . . .	19
2.2.3	Electric dipole radiation . . . . .	19
2.3	The resonance lines of the hydrogen atom including spin . . . . .	20
2.4	Evolution of optical selection rules for the hydrogen atom in a $C_{2v}$ arrangement of point charges . . . . .	22
2.4.1	The hydrogen atom in the presence of a weak magnetic field . . . . .	25
2.4.2	The hydrogen atom in the presence of a $C_{2v}$ arrangement of point charges and a weak magnetic field . . . . .	27
2.5	Summary and Outlook . . . . .	31
2.6	Author contributions . . . . .	32
2.7	SI: Energy levels of the hydrogen atom in a magnetic field . . . . .	33
2.8	SI: Electric dipole oscillations . . . . .	34
2.9	SI: Spin-orbit coupling . . . . .	36

2.10	SI: The resonance line of the hydrogen atom including spin . . . . .	37
2.11	SI: Transition dipole moment and oscillator strength . . . . .	40
2.12	SI: Jones calculus applied to the oscillation of an atomic electric dipole . . . . .	41
2.13	SI: Perturbation-theory description of distortion by extra charges . . . . .	43
<b>3</b>	<b>Proposal for time-resolved optical preparation and detection of triplet-exciton spin coherence in organic molecules</b>	<b>45</b>
3.1	Introduction . . . . .	46
3.2	Theoretical proof of principle for a molecular TRFR experiment . . . . .	46
3.3	Feasibility analysis . . . . .	53
3.3.1	TRFR experiment with an ensemble of randomly oriented molecules . . . . .	53
3.3.2	Single molecule TRFR experiment . . . . .	54
3.3.3	Franck-Condon suppression of optical transitions . . . . .	54
3.3.4	Persistence of spin-orientation effects for symmetries lower than $C_{2v}$ . . . . .	55
3.4	Summary and Outlook . . . . .	55
3.5	Author contributions . . . . .	56
3.6	SI: Principles of the TRFR technique for an idealized $\Pi$ -system . . . . .	57
3.7	SI: Fundamentals of a molecular TRFR experiment . . . . .	64
3.8	SI: Polarization rotation for a TRFR experiment applied to a $V$ -system . . . . .	66
3.9	SI: Idealized TRFR scenario for a $V$ -system . . . . .	73
3.10	SI: TRFR model results and discussion . . . . .	75
3.11	SI: Computational details and methods . . . . .	78
3.12	SI: Symmetry analysis . . . . .	83
3.13	SI: Franck-Condon factors . . . . .	85
3.14	SI: Optical selection rules of platinum porphyrins . . . . .	86
3.15	SI: Ensemble of randomly oriented molecules . . . . .	91
<b>4</b>	<b>Proposal for time-resolved optical probing of electronic spin coherence in divacancy defects in SiC</b>	<b>97</b>
4.1	Introduction . . . . .	98
4.2	Fundamentals for a TRFR experiment with a homogeneous ensemble of $c$ -axis divacancies in SiC . . . . .	99
4.3	Estimating the polarization rotation of a linear probe for a TRFR experiment with $c$ -axis divacancies in SiC . . . . .	106

4.3.1	Assumptions and parameters . . . . .	106
4.3.2	Results and discussion . . . . .	108
4.4	Summary and Outlook . . . . .	109
4.5	Author contributions . . . . .	110
4.6	SI: Estimating the transition dipole moment of divacancies in SiC	111
4.7	SI: Dependency on the magnetic field angle for the optical selection rules of <i>c</i> -axis divacancies in SiC . . . . .	112
<b>5</b>	<b>Identification and tunable optical coherent control of transition- metal spins in silicon carbide</b>	<b>115</b>
5.1	Introduction . . . . .	116
5.2	Materials and experimental methods . . . . .	118
5.3	Single-laser characterization . . . . .	120
5.4	Two-laser characterization . . . . .	122
5.5	Analysis . . . . .	123
5.6	Coherent Population Trapping . . . . .	126
5.7	Further discussion . . . . .	129
5.8	Summary and Outlook . . . . .	129
5.9	Methods . . . . .	130
5.10	Author contributions . . . . .	131
5.11	SI: Single-laser spectroscopy . . . . .	132
5.12	SI: Additional two-laser spectroscopy for <b>Mo</b> in 6H-SiC . . . . .	133
5.13	SI: Two-laser spectroscopy for <b>Mo</b> in 4H-SiC . . . . .	135
5.14	SI: Franck-Condon principle with respect to spin . . . . .	138
5.15	SI: V-scheme dip . . . . .	140
5.16	SI: Modeling of coherent population trapping . . . . .	143
5.17	SI: Anisotropic <b>g</b> -factor in the effective spin-Hamiltonian . . . . .	144
5.17.1	Relationship between effective spin Hamiltonian and local configuration of the defect . . . . .	144
5.17.2	Ion in 4d <sup>1</sup> configuration in the presence of crystal field of C <sub>3v</sub> symmetry and spin-orbit coupling . . . . .	146
5.17.3	Validity of our assumptions . . . . .	150
5.17.4	Summary . . . . .	152
