Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.

Propositions

1. As activated eosinophils and basophils along with IL-31 all have a an important contribution in the blister formation in bullous pemphigoid, these pathways may serve as future drug targets.
(This thesis)
2. The contribution of basophils in the blistering pathogenesis in bullous pemphigoid warrants greater research attention.
(This thesis)
3. IgE does not significantly impact the blistering mechanism in bullous pemphigoid, however, it is likely involved in the urticarial phase of the disease.
(This thesis)
4. While immune checkpoint inhibitors represent an incredible progress in cancer treatment outcomes, it is crucial to recognize the risk of developing diverse clinical subtypes of pemphigoid as an immune-related adverse event.
(This thesis)
5. The autoantibodies observed in both bullous pemphigoid and neurological diseases might indicate a missing link between these conditions.
(This thesis)
6. The difference in complement activation that initiates a cascade of inflammatory events may distinguish non-bullous from bullous pemphigoid.
(This thesis)
7. “Nothing in life is to be feared, it is only to be understood. Now is the time to understand more, so that we may fear less.”
(Marie Curie)
8. “The scientist is not a person who gives the right answers, he's one who asks the right questions.”
(Claude Levi-Strauss)
9. “Scientists are actually preoccupied with accomplishment. So they are focused on whether they can do something. They never stop to ask if they should do something.”
(Michael Crichton)
10. There is an art to science, and science in art; the two are not enemies, but different aspects of the whole.
(Isaac Asimov)
