### Copyright

Other than for strictly personal use, it is not permitted to download or to forward/distribute the text or part of it without the consent of the author(s) and/or copyright holder(s), unless the work is under an open content license (like Creative Commons).

The publication may also be distributed here under the terms of Article 25fa of the Dutch Copyright Act, indicated by the "Taverne" license. More information can be found on the University of Groningen website: <https://www.rug.nl/library/open-access/self-archiving-pure/taverne-amendment>.

### Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

*Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.*

1. Hyaluronic acid simple in structure, complex in nature (this thesis).
2. Methodology is the foundation of scientific work; it is through careful design and execution that hypotheses are transformed into measurable outcomes (this thesis)
3. Solid-state NMR provides a powerful, all-in-one solution for diverse research, from single molecules to multicellular tissues (this thesis)
4. CD44 binding to high molecular weight HA slows enzymatic degradation, suggesting CD44 protective role in ECM integrity (this thesis)
5. Precision in experimental design is not only a technical requirement, but a reflection of the integrity and reproducibility that science demands (this thesis).
6. Scientific publications shall be made available free of charge at least for non-profitable studies
7. Research does not only seek answers to questions but also questions the answers already out there
8. Keeping authors' names and affiliations anonymous during the peer review process of research papers can help eliminate bias and ensure a more impartial evaluation of the research
