Acknowledgements

This thesis is the result of my research at the Department of Economics of the University of Groningen. The five years I have spent there as a PhD student have been a tremendously worthwhile experience. I owe thanks to many people who in one way or another contributed to the realization of this thesis. Some of them I would like to mention explicitly.

First of all, I want to express my gratitude to my first promotor and direct supervisor, Robert Lensink, for being a very accessible and friendly supervisor, and for allowing me a lot of freedom in following my interests. I have especially good memories of the time after we both descended from the fifth to the fourth floor of the WSN building, and I really enjoyed working with him on our joint research projects. I also want to thank my second promotor, Elmer Sterken, for giving me the opportunity to work on this research project. Thanks also to Niels Hermes for his guidance and support in the early days of my life as a PhD student. Moreover, Elmer and Niels provided useful comments on earlier versions of some of the chapters of this thesis.

I am also grateful to the members of the committee for their willingness to carefully read the entire manuscript. Stijn Claessens provided helpful suggestions that definitely improved the quality of this thesis. I am indebted to Shubhashis Gangopadhyay, who was also involved in the origination of this project, for his hospitality during my stay in Delhi.

The various chapters of this thesis benefited from comments and suggestions by a number of anonymous referees and the participants of several seminars and conferences.

Thanks to Jan Peter Schmittmann from ABN Amro Netherlands and Romesh Sobti and his colleagues from ABN Amro India, who provided me

with invaluable information about the Indian financial system and anecdotal evidence of the role of business groups.

Many colleagues were responsible for creating a pleasant working environment, both at the fifth and at the fourth floor. To a large extent, this pleasant environment was due to my roommates, Annette Zeilstra and Ilko Naaborg. I really enjoyed teaching the Finance 1 and 2 courses together with the other members of the team. I want to thank them for creating a cooperative atmosphere and allowing me to benefit from their experience.

The funding for this research project was provided by the Netherlands Organisation for Scientific Research (NWO). Additional financial support by SOM and the Finance Department at the University of Groningen is gratefully acknowledged.

After I moved to Almere, I could always count on the hospitality of my parents and friends when I needed a place to sleep in Groningen. Thanks to all of you. My parents and Remmelt and Fenneke deserve special thanks for letting me use their guest room so often and allowing me to arrive and leave at ungodly hours.

Finally, I want to thank Maartje for her patience and many other things. I am very happy that I will have more time to spend with you and Koojsje from now on.

Almere, August 2005
