Prof. dr. J. de Haan

Beoordelingscommissie: Prof. dr. A.C. Meijdam
Prof. dr. E. Sterken
Prof. dr. J.E. Sturm

Acknowledgements

This thesis is the product of five years of labour, both by me and others. First of all, I could not have done it without my supervisors, Ben Heijdra and Jakob de Haan. I enjoyed working with Ben as he always pushed me to the limit. The many discussions were sometimes explosive, but did result in new insights and the first three chapters of this thesis. I wrote chapter 5 together with Jakob and he made sure I did not lose sight of the ultimate objective: to finish this thesis.

The whole project would not have been possible without the initiators Jan Jacobs, Peter Groote, and Jan-Egbert Sturm. They went through all bureaucratic procedures to collect the required funds. During the project Jan's door was always open for conversations, work-related and otherwise. I thank Jan Oosterhaven for showing me how intriguing science can be. He hired me as a research assistant and motivated me to choose for a scientific career.

I am indebted to the reading committee, Elmer Sterken, Lex Meijdam en Jan-Egbert Sturm for their willingness to read the final manuscript and for their comments. I enjoyed the hospitality of Jan-Egbert during my visit to Konstanz in the autumn of 2004, where we laid the foundations for chapter 6. Robert Inklaar provided us with the data and finally helped me finish this, sometimes frustrating, chapter.

I apologise to all people who were ever forced to share their room with me and my noisy habits. A special word of thanks must go to Mark. The days in 505 would not have been the same without the small blue ball, the large coloured ball, and the bouncing ball. To Abdul and the neighbours in those days: sorry for that!

For dinner at the ACLO I enjoyed the company of Adriaan, Pim, Robert, Macro, Bart and many others. It always was a pleasant break and the coffee afterwards gave me enough energy to continue working late.

Finally I especially thank Marijke for her patience and support. From now on I hopefully have more time and I hereby promise to spend it with her.

Ward Romp

Contents

1	Introduction	1
1.1	Realistic demographics in overlapping generations models	1
1.2	Public capital and economic growth: an empirical analysis	6
I	Realistic Demographics in OLG Models	9
2	The Basic Model	11
