Household Demand for Energy,
Water and the Collection of Waste:
a Microeconomic Analysis

Proefschrift

ter verkrijging van het doctoraat in de
Economische Wetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. D.F.J. Bosscher,
in het openbaar te verdedigen op
donderdag 17 mei 2001
om 14.15 uur

door

Vincentius Gerardus Maria Linderhof
geboren op 10 augustus 1968
te Raalte

Promotor: Prof.dr P. Kooreman

Acknowledgements

In December 1994, I started working on the project ‘Economic aspects of household metabolism in the context of sustainability and environmental quality’ and this thesis is the final result. At the end, I conclude that this research project has been very special in many respects. First of all, the topic, household demand for energy, water and the collection of waste, is a very day-to-day topic. The discussions about my research were not only held at the academic level, but also at a more informal level. Furthermore, I participated in the multidisciplinary project called HOMES (HOusehold Metabolism Effectively Sustainable), in which researchers from different backgrounds collaborated. Finally, during my research project I worked at two universities, namely Wageningen Agricultural University and the University of Groningen. All these experiences have enriched me personally as well as professionally.

When I started working as a Ph.D. student I believed that I could write a thesis all by myself. In retrospect, I realize that this thesis would not have been completed without the help from a lot of persons. I would like to take this opportunity to acknowledge them.

First of all, I would like to express my gratitude to my promoter Peter Kooreman, who gave me the opportunity to work on this Ph.D. project. For more than six years he was willing to help me with all the problems I came across. He straightened my thoughts and improved my work in a constructive way. With his experience and knowledge, in particular household economics, he taught me how to carry out economic research.

Furthermore, the members of the Ph.D. committee Ton Schoot Uiterkamp, Catrinus Jepma, and Willem Boeschoten are gratefully acknowledged for reading the manuscript and providing me with valuable suggestions for improvements.

Next, I would like to thank my colleagues of the Department of Household and Consumer Studies at the Wageningen Agricultural University. Although I stayed there for only five months, I thank them for their support in these

months. The Wageningen Agricultural University is gratefully acknowledged for their financial support.

Also, I would like to thank my colleagues of the Department of General Economics at the University of Groningen. During more than four-and-a-half years they created an inspiring atmosphere to work in. In this respect special thanks go to Doede Wiersma, Thijs Zuidema, Bert Schoonbeek, Victoria Hoogenveen, Jan Kakes, Herman Nieuwenhuis, and Mairianne van den Berg.

I am grateful to my two roommates Chris Bojke and Marco Haan. For one-and-a-half years I shared a room with Chris. We had interesting discussions on economics and, of course, soccer. During my last year in Groningen, I shared a room with Marco. I would like to thank him for our talks and discussions. I also would like to thank Marco for the technical support.

Next, many thanks go to my HOMES colleagues with whom I had interesting, stimulating and inspiring discussions about multidisciplinary research. In particular, I would like to thank Josee Ligteringen, Birgitta Gatersleben, Jack van der Wal, Klaas Jan Noorman, Cor Kamminga, Albertine van Diepen, and Andre Bus.

Since January 1999, I have been working at MuConsult in Amersfoort. The combination of a 'regular' job and writing my thesis has been tough. Fortunately, Henk Meurs gave me the opportunity to pursue working on my thesis. I would also like to thank my colleagues at MuConsult for their support.

Furthermore, I would like to thank my family and friends for their support. Despite the fact that most of them were not familiar with scientific research, we had interesting discussions about my research. I learned how to explain complex issues in a simple way. Many thanks go to Wolter Hassink who is also one of the 'paranimfen'. He played a crucial role in my decision to become a Ph.D. student.

I would like to thank my parents for their concern and support during all these years.

Finally and most important of all, I would like to thank my wife Els and our children Merel and Sofie. Merel and Sofie gave me pleasant distraction. Els took care of Merel and Sofie when I had to work on my thesis again, and she did most of the work in our household. Without her love, her support, and most of all her patience, I would never have been able to complete this book.

Vincent Linderhof

Contents

1	Introduction	1
1.1	Introduction	1
1.2	HOMES	2
1.3	Household production theory	4
1.4	The structure of this book	6
2	Economic aspects of household metabolism: historical analysis	9
2.1	Introduction	9
2.2	Household consumption, prices and tariff structures of energy and water	10
2.2.1	Natural gas	10
2.2.2	Electricity	13
2.2.3	Water	16
2.3	Possession rates and the. energy and water use of appliances	18
2.3.1	Refrigerators	21
2.3.2	Freezers	23
2.3.3	Washing machines	23
2.3.4	Dishwashers	26
2.4	Household waste	26
2.5	Car ownership and use	28
2.6	Conclusions	31
3	Consumer durables and energy and water use	33
3.1	Introduction	33
3.2	Consumer durables prices, energy and water use, and the hedonic regression technique	34
3.2.1	Introduction	34
3.2.2	Data	35
3.2.3	Econometric specification and estimation results	40
3.2.4	Discussion and conclusions	46

3.3	The consumer choice between a high- and low-efficiency consumer durable	48
3.3.1	Introduction	48
3.3.2	General framework	49
3.3.3	Two subsidy schemes	53
3.3.4	Energy tax	59
3.3.5	Take-back effect	61
3.4	Conclusions	62
4	Household energy and water use: an econometric analysis	65
4.1	Introduction	65
4.2	Literature	67
4.3	Reduced form demand equations	76
4.3.1	The model	76
4.3.2	Econometric specification	78
4.4	Data	82
4.5	Estimation results	83
4.5.1	Natural gas	84
4.5.2	Electricity	89
4.5.3	Water	93
4.5.4	Different household types	94
4.6	Conclusions	98
5	Weight-based pricing in the collection of household waste: the Oostzaan case	101
5.1	Introduction	101
5.2	Literature	103
5.2.1	Household production framework	103
5.2.2	Consumer behavior and household waste	106
5.2.3	Household waste management	108
5.3	The Oostzaan case	109
5.4	Econometric analysis	115
5.4.1	Specifications	115
5.4.2	Estimation results	117
5.5	Discussion	124
5.6	Conclusions	126

6	How helpful are economic incentives to steer consumer behavior towards sustainability?	127
6.1	Introduction	127
6.2	Some social science views on sustainable consumer behavior	128
6.3	Instruments for affecting consumer behavior	133
6.4	Allocative equivalence of energy taxation and tradeable rations; an example	136
6.5	Financial incentives	139
6.6	Concluding remarks	142
	Bibliography	145
	Samenvatting (summary in Dutch)	155
