RIJKSUNIVERSITEIT GRONINGEN

OPERATIONAL PERFORMANCE OF TWO-STAGE FOOD
PRODUCTION SYSTEMS

Process interactions and capacitated storage

Proefschrift

ter verkrijging van het doctoraat in de
Bedrijfskunde
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
donderdag 25 januari 2007
om 16.15 uur

door

Renzo Akkerman

geboren op 26 augustus 1977
te Balk

Promotor: Prof. dr. ir. G.J.C. Gaalman

Copromotor: Dr. D.P. van Donk

Beoordelingscommissie: Prof. dr. M. Grunow
Prof. dr. ir. J.G.A.J van der Vorst
Prof. dr. J. Wijngaard

Acknowledgements

This thesis has been “almost finished” for some time now... but now it suddenly seems to be finished for real. The additional practice-oriented research undertaken at the end of my PhD might be the cause for some delays, but—more importantly—it also resulted in valuable experiences and interesting research material.

The work presented in this thesis was carried out at the Production Systems Design group in the Faculty of Management and Organization at the University of Groningen. I want to thank its current *and* past members for creating a pleasant environment to work in. Specifically, I want to thank Chetan, Gert, and Peter for their part in this.

Many people have been in some way involved with this research project over the last couple of years, and I owe them my thanks. First of all, Dirk Pieter van Donk and Gerard Gaalman, for their enthusiasm and guidance throughout the project. Secondly, Martin Grunow, Jack van der Vorst, and Jacob Wijngaard, for being on the assessment committee for this thesis. Next, staff members of the companies I was fortunate to work with, for sharing their knowledge and experiences (as well as their “problems”). Finally, my paranymphs Jasper and Gert, for their support in the final hours.

And really finally, I would like to thank my family and friends, simply for being around during this whole endeavour.

Renzo Akkerman
