Prof. dr. ir. F.J.A.M. van Houten
Prof. dr. E. Molleman

Acknowledgements

Here it is, my PhD thesis. It goes without saying that this thesis is the result of a long process, but where did this process start? And who were involved in it? To answer this, I think I should focus on the last five years, since these were the years during which I worked on the thesis. However, there were, of course, also many other events prior to these five years that have determined this course of my life. Raising me with a “Don't settle for anything less than the best” mentality, my parents stimulated me to put my abilities to the test constantly. Without their support, I would not have come this far.

My study in Business Administration at the Faculty of Management & Organization in Groningen, which I started in September 1993, also contributed to the process. It laid the foundations for my way of thinking about and dealing with organizations and the problems they encounter. It also triggered my interest in conducting research. The end project of my final year involved analyzing a production system for solar collectors, designing alternative manufacturing layouts, and recommending one of them. My supervisors in this project were Jannes Slomp and Marco de Witte. Their enthusiasm encouraged me to continue to conduct research. Jannes Slomp has played a very important role in my working life ever since. He created many opportunities for me and I am very grateful to him for that. He asked me to make educational CD-ROMs and initiated research projects in which I became involved. Later on he persuaded me to take up a PhD position, which I started in 2000.

I was lucky to have Gerard Gaalman and Jannes Slomp as supervisors in my PhD research. In my opinion, they form a fantastic and complementary supervising team. Gerard is able to grasp your thoughts and ideas and to foresee all the consequences of it in detail. Moreover, he often makes you reconsider a particular issue by asking a single question or by just placing a tiny question mark in your text. Whenever you get lost in details, or are unable to see the connections, or in need of a few more ideas, Jannes can get you back on track. I thank both Gerard and Jannes for their involvement and for coaching me during the process.

I thank the reading committee, Fred van Houten, Nallan Suresh, and Eric Molleman for their efforts and willingness to read the result of the process: the manuscript.

In addition, I would like to thank the many colleagues who supported me in one way or another. I particularly refer to all the colleagues in the Production Systems Design group. Being part of that group has been a great pleasure.

Without Monique and especially Luca, Gino, Giulia and Stella, I would probably have finished this thesis earlier. However, I'm very grateful that Monique takes part in my life and that she gave birth to three of our four children during the time when I only 'gave birth' to this single thesis.

I dedicate this thesis to Luca, Gino, Giulia and Stella.

Jos Bokhorst

Groningen, January 2005

Contents

CHAPTER 1 INTRODUCTION.....	1	
1.1. Research area	1	
1.2. Shop floor design activities.....	3	
1.2.1. Layout.....	3	
1.2.2. Process technology	4	
1.2.3. Job design	5	
1.3. Coherence in the papers	7	
1.4. Overview of the thesis.....	8	
CHAPTER 2 LAYOUT AND INVESTMENTS	10	
Decision support framework for the selection of a manufacturing layout	10	
An integrated model for part-operation allocation and investments in CNC technology	25	
CHAPTER 3 CROSS-TRAINING.....	52	
Cross-training in a cellular manufacturing environment.....	52	
Development and evaluation of cross-training policies for manufacturing teams	72	
CHAPTER 4 LABOR ALLOCATION.....	101	
On the who-rule in Dual Resource Constrained (DRC) manufacturing systems	101	
Labour allocation rules in Dual Resource Constrained (DRC) manufacturing systems	with worker differences	129
CHAPTER 5 CONCLUDING REMARKS AND DIRECTIONS FOR FURTHER		
RESEARCH.....	148	
5.1. Concluding remarks	148	
5.1.1. Layout.....	148	
5.1.2. Investments	148	
5.1.3. Cross-training	149	
5.1.4. Labor allocation.....	150	
5.2. Future research issues	151	
SUMMARY	153	
SAMENVATTING	159
