The ‘boekje’ is finished!

This thesis would not have been accomplished without the support of many people and organisations.

First of all, I would like to thank my supervisors, who provided my research with very valuable comments. Particularly Bart van Ark and Gerard Kuper encouraged me to finish the project when I already worked at CPB Netherlands Bureau of Economic Policy Analysis in The Hague. But Simon Kuipers and Rainer Fremdling certainly contributed to the quality of the research during my PhD years in Groningen. I also greatly appreciate the efforts of the PhD committee members, Stephen Broadberry, Ben Heijdra, and Theo van de Klundert.

Furthermore, I owe much to colleagues and experts in the fields of economic history, macro-economic growth theory and the econometrics of time series and panel data. Papers in co-authorship with Ronald Albers, Bart van Ark and Gerard Kuper were the basis for the empirical chapters in this thesis. I greatly appreciate the clarifying feedback by researchers in the field on my earlier papers and those who very kindly delivered data for my research: Ronald Albers, Bart van Ark, Stephen Broadberry, Nicholas Crafts, Herman de Jong, Mary O’Mahony, Angus Maddison, Theo van de Klundert, Bart Verspagen and Jan Luiten van Zanden. Very useful assistance in econometric estimation and testing mainly came from Jan Jacobs and Jan Egbert Sturm. I also used the comments by various participants at seminars, conferences and summer schools. The lay-out of this thesis improved considerably with the help of Siep Kroonenberg.

A number of organisations gave me the opportunity to write the thesis. I would like to thank NWO-MaGW for financial support of the PhD research. The SOM Graduate School at the University of Groningen provided practical and financial support. I also benefited from courses,

workshops and summer schools of the NAKE Netherlands Network for PhD students in economics and the N.W. Posthumus Institute for PhD students in economic history. Besides, I greatly appreciate that my current employer, CPB Netherlands Bureau of Economic Policy Analysis, willingly granted me leave and working-hours to finish my thesis.

I enjoyed working in Groningen not in the least thanks to my colleagues. I want to mention some, though I am afraid I forget others: Marianne van den Berg, Alex Hoen, Remco Kouwenhoven, Fieke van der Lecq, and Jan Egbert Sturm. A number of CPB colleagues continued to show interest and thereby gave me an incentive to go on. Finally, special thanks go to Jan Jacobs, for being a very nice room-mate at the university, and to Marco Haan, for his mental support and his hospitality.

Above all, my relatives and friends (deaf or hearing, male or female, standard or deviating) were of inestimable value. They supported me in various ways, often indirectly and unaware. I thank all of you from the bottom of my heart!
